

Earth-like planet could support life

Astronomers have spotted a planet called Ross 128 b, 11 light-years away from Earth that can support life. <http://digit.in/ESplanet>

Google Maps gets a colourful update

Google new update for its maps adds colour schemes to distinguishing between different points of interest. <http://digit.in/GMapsUp>

Acer Spin 1

Jack of all trades

T

he new Acer Spin 1 is a cut above the rest.

It is not the best in terms of performance, but there is more to it that meets the eye. Being a budget centric machine, the Acer Spin 1 tries to offer the right mix of specifications and build and quality. This means that the Acer Spin 1 ends up making some compromises in order to keep the cost low. The 11.6-inch Acer Spin 1 features a fairly usable chiclet style keyboard. The keys are slightly textured, which offers good control over the keyboard and they press down with no audible sound. If you are expecting Core i3 level performance then you would be disappointed. The small N4200 on the Acer Spin is one of the most powerful mobile Pentium processors out there, though you still can't game on it or run heavy photo editing apps. Multi-tasking is also limited as there is just 4 GB of RAM and the processor is passively cooled. The Acer Spin 1 is quite simply a jack of all trades. It has an impressive touchscreen display, has a decent keyboard and touchpad setup and offers good battery life. Its build quality and performance could have been better, but both seem like a minor compromise to keep the price low. Overall, if you are looking for a laptop with a 1080p touch-capable display, with Windows 10 and MS Office pre-installed, this might be your only option. However, keep in mind that the processor is just powerful enough to take on day-to-day applications only.

JBL Flip 4

A more mature, versatile and robust Flip

T

he JBL Flip 4 houses a new pair of drivers, and as far as memory helps, it does seem to sound better than the older Flip 3. The primary two elements for the Flip 4 sounds better, has improved bass output, and louder overall sound. That said, the lows do sound quite taut and cohesive, in tune with the rest of the frequency range reproduction. The mids are clean and very well emphasised, and there is a characteristic sweetness that makes the JBL Flip 4 really enjoyable. The highs, too, retain the sweetness, and sound quite precise. They do not sound piercing or shrill, which makes fine hi-hat rolls bearable. The JBL Flip 4 is larger than the Flip 3, and at 515 grams, there is a nice heft to the speaker that does not make it feel heavy, and yet exudes a solid, sturdy confidence. With the new stitched fabric mesh wrapping it, the JBL Flip 4 looks really premium and plush.

The JBL Flip 4 is a more mature product, offering better balanced sound than its predecessor, the Flip 3. However, its bass delivery is still a bit weak, and it is here that the UE Wonderboom plays better. Nevertheless, the JBL Flip 4 offers great clarity, and the sound signature is sweet and warm. If you like your audio to sound more neutral, the JBL Flip 4 will impress you more than the UE Wonderboom. It also offers aux connectivity, speakerphone and full waterproofing, and like the UE Boom 2, can pair up to a claimed 100 other Flip 4s simultaneously via a mobile app. At ₹8,599, it is fairly commendable, only playing second fiddle to UE Wonderboom by a margin on account of being a bit more expensive and lacking good bass.
