

Reddit is fake news?

Researchers have found that Reddit was as bad as Twitter or Facebook when it came to misinformation in 2016. <http://dgit.in/FakeNewsReddit>

Russian hackers targeting journals

According to an AP report, the hackers have been targeting journalists from Russia, Ukraine, Moldova, the Baltics and America since 2014. <http://dgit.in/RusHckrs>

>> Feedback for the December 2017 issue of Digit

Send your feedback at editor@dgit.in

Hi Robert, I am an ardent Digit reader. And I need a suggestion from you. What I have seen is one part of Digit magazine has reviews of products or software and publishes its pros and cons. Is this initiative:

- 1) Taken by Digit or
- 2) Organisations pay you to do reviews, or
- 3) Digit goes to organisations and says that we want to review your stuff.

If this initiative is taken by Digit it is legally OK to publish pros and cons of a product publicly without obtaining permission from the owner of product or software?. The reason behind this question is if I want to review any product or software publicly on my own through blog or video, am I allowed to do so without obtaining permission?

—Raaj

You are allowed to publish your own opinion of any product that you purchase legally or ask for review.

Digit does not take any money for reviews, and our editorial team does not even interact with their marketing teams.

If certain companies refuse to send us products because we have given them a bad review in the past, then we either buy the product ourselves and then review, or we publicly state to our readers that the company refused to send us products. Needless to say this happens very rarely.

Always be honest in your reviews, and you will never have any legal problems with any company whatsoever.

—Robert

Hi there, Robert. I was reading your editorial in the ZeroOne issue and found some chunks of text creating a buzz inside the grammar Nazi I have kindled myself into:

- > *Ob well. I'll take my mind of it by playing a game.*
- I'll take my mind off* it.
- > *Our long term evolution might in fact still be natural selection, but our short term evolution certainly is artificial.*
- ...but our* short term evolution...
- > *.. technology enabled artificial selection is acting at unheard of speeds and changing us faster*
- ...acting at speeds unheard of* and is* changing us faster

Hope my picky self finds its way into the Executive Editor's readership :)

—Punya Vashist

Wow, thanks. Excuse me while I go hang the people who were supposed to proofread this. I can't believe I made such silly typos and no one caught them!

—Robert

When I applied for a job at Digit last time, I was 19. On 3rd May

2006, I got a reply from Mr. Deepak Ajwani, the editor at that time, asking me to write three articles and submit them. I was working on that and was on cloud number 9 just because I got a reply. Then something happened and changed my life, my Part 1 results came out and to my surprise, even after securing 1st Class marks in my honors subject, I had failed the exam due to the pass course subjects. I was never a bad student, not at least in Physics or Mathematics (my real nightmare was Chemistry). This shattered me completely. I was so depressed that I did not even submit my article (I was young and inexperienced, in my defense). The same thing happened next year and I gave up on the 2nd dream of my life (1st was to be a Digit employee, not exaggerating), which was to pursue the honors degree in Computer Science. I did a BCA from an open university, did an M.Sc. from an open university, got extremely high marks, which does not help in real life as every tech company was looking for engineers at that time and I, having lost 2-3 study years and without a strong degree, was just devastated, depressed and hopeless.

I was so furious at the situation that I hated Computer Science at that time, but it was still the only thing that came naturally to me. I tried my hands at some freelance Web Designing and some basic software making, but I knew that there was nothing left for me in this field.

A lot of time had passed, the troubleshooting section of Digit, which was one of my favorites, was slowly being replaced by cheap Internet.

Out of desperation due to joblessness I filled up a form for a Public Sector Bank employment exam, did not prepare for it but somehow got the job.

It's been 4 years since I started working there. It's paying the bills, but as Steve Jobs once said, you should not do today that you would not do on the last day of your life. I am 31 now. Still an avid reader of Digit, still with technology as my only passion, still thinking I have what it takes to fill up that page
