GET CHATTY

THIS MONTH IN TECH:
Learn how to build your own Chatbot in this month's workshop, and then explore the Origins of wireless charging. After that, learn how to invest in cryptocurrency and take a look at some up-and-coming mental health startups in India.

Google kills Tango

As announced earlier this year, Google is killing off Tango, its augmented reality platform for high-performance devices, instead shifting focus towards the more mass-market ARCore. Tango support will officially cease on March 1, 2018.

WHAT'S NEW

Robot carries the Olympic torch

As the 2020 Olympic games in Tokyo draw closer to us, the Olympic torch's iconic journey around the world had something quite unique about it this time around. During the 41st day of the Olympic torch relay, DRC Hubo+, a robot created by the Korean Advanced Institute of Science and Technology (KAIST), carried the torch for a leg of the

journey. Hubo's run was only 150 metres (roughly 500 feet) long, but it ended with a demonstration. At the end of its leg it reached a wall, cut a hole through that wall, and then passed the torch on to its creator, Professor Oh Jun Ho, all while the torch remained alight in its hand. This move was a part of the organising committee's ongoing efforts in letting the world know just how tech savvy the 2020 Olympic games are going to be.

Google Maps gets turn by turn navigation for public transport

While turn by turn navigation has been a standard feature for driving navigation on Google Maps, it is now being brought to transit navigation as well. In case you lose track of your commute, the app will now send a push notification when you're approaching your stop.

While drivers behind the wheel are naturally going to be more attentive, it is public

transport passengers who will find this addition most helpful. After all, they're the ones that need to be woken out of a podcast, playlist, or even a casual nap. The feature also shows your progress in real time on the notification itself, as well as how many stops you need to or will be passing before reaching your destination.

Windows 10 password manager flaw

A flaw was found in a Windows 10 image that came bundled with a third party password management tool. The software, Keeper, allowed malicious websites to steal passwords. Updates to the software have supposedly fixed the issue.

Tesla Superchargers ban commercial drivers

Tesla has released new policy that forbids any new commercial drivers from using its charging stations. The policy is applicable to anyone who has purchased a Tesla after December 15th and is intended to enforce 'fair Supercharger usage'.
