

**Snap AR for menu items**

Scanning a Snap code from a menu can let you preview your food in AR before you order it. <http://digit.in/SnpARMenu>

**Real-time electricity map**

A new online tool that aggregates import and export electricity data in real time to show you the source of the electricity you use <http://digit.in/ElecMap>

Optoma HD27 Home Entertainment Projector

Baby ain't got black

Price
₹99,750

Optoma has been operating in the country for a while, especially in the education sector but the average consumer could barely get their hands on one. That changed earlier this year when they brought their full range of home entertainment models including the HD27. The HD27 is aimed at gamers in particular, and for that they have a Game mode which improves response times and amps up the contrast level a little.

While it's very easy to achieve immersion with movies, we found gaming to be not so consistent. Games with not a lot of rapid movement such as Gran Turismo Sport feel great but anything such as CS:GO or PUBG and you're at a disadvantage. These games rely on the gamer having to spot the minutest movement at large distances, and that's a problem. Then again, most projectors would face the same problem. We can't opine on the 3D aspect of the HD27 since we didn't get the appropriate pair of glasses. The Optoma HD27 is capable of delivering some really striking colours, however, it does falter with black levels. With the Lagom charts, we noticed it struggle to produce proper black levels. The onboard speakers being 10 watts are best left turned off. However, when you consider the price, then it works out to be a good bargain.

Honor 7X

A step back

The Honor 7X is as premium as the Mi A1. It has a metal build with curved edges and is ever so slightly taller than the Mi A1. Although reaching all corners of the phone isn't easy with single-handed use, it is fairly ergonomic. The display has a maximum luminance of 417 lux. It isn't the brightest display out there and sunlight visibility does suffer, but if you are going to read web pages or Kindle books, you should be fine with auto brightness. You may want to bump up the brightness manually while watching movies though. If there is a complaint it's with the audio quality from the speaker. The experience of watching videos is very underwhelming. The background score of the movie trailer and the vocals seem muddled.

Running everyday apps like Facebook, Whatsapp, YouTube, Netflix, and more is a breeze. The smartphone multitasks well and stutters only when you run heavy apps and games back to back. The biggest downside to the performance of the smartphone was gaming. Casual games like Farm Hero Saga ran well but graphically heavy games like Asphalt 8 showed patchy framerates. Since the smartphone has a dual camera setup, you'd expect it to click good bokeh photos. However, that isn't the case. The bokeh photos are average at best and the camera on the Honor 7X isn't as groundbreaking as they were on the Honor 6X, with respect to their respective competitors. For Rs 13,000 device, the Honor 7X isn't the best option out there. It has a great display and good battery life and the overall performance is average at best. It loses out to the Mi A1 as far as the camera is concerned and graphically heavy games.
