Chromebooks with SD845

According to XDA Developers, Snapdragon 845 could be at the center of some future Chromebooks. <http://dgit.in/SDChrome>

Netgear ReadyNAS 424

Say hello to Denverton

Price
₹38,000
(+ Taxes)

T

he NETGEAR ReadyNAS 424 is part of the new

lineup powered by Intel's ULP Denverton SoCs. The ReadyNAS 424, in particular, has the Atom C3338 (2 cores, 2 threads) for all the heavy lifting. Compared to Avoton SKUs, the Denverton SoCs offer upwards of 70% improvement in certain benchmarks so we're going to see more consistent performance with greater number of simultaneously connected users. The ReadyNAS 424 is built really well, there's a 92 mm fan which managed to keep the unit running at 36 degrees celsius even while we were streaming 4 different movies off it. The front panel has a very clean look and the USB 3.0 port is located inside the front panel shielding it from dust. The bay doors don't have a turn-key lock which is still fine since you're not going to be swapping drives so frequently. Performance wise, we're looking at file copy speeds of about 106 MBps which is practically as high as can be on a GbE network. As for trace based tests such as the NASPT content creation test, we managed to get 11.3 MBps. Transferring data via USB 3.0 was equally impressive as well with peak FAT write speeds hovering around 88 MBps. Overall, the ReadyNAS 424 is a pretty great NAS aimed at the SOHO market.

Flipkart Billion Capture Plus 4GB

Flipkart's foray into mobiles

T

he Capture+ is key to the company's ongoing pivot

towards making consumer electronics. At its core is Flipkart's understanding of what the customer wants out of a phone. While on paper, the Capture+ offers everything you can ask from a phone at this price, the quality of the offerings isn't very high. The very first giveaway is the milled aluminium body fitted with a plastic back panel. At 176 grams, it is quite hefty which adds to the grip and at 8.5mm, it is by no means, thin.

The screen has a lot of glare and poor sunlight legibility. That's mainly because the display reaches a maximum luminance of 454 lux which isn't that high. The colours are not as punchy as one would expect from an AMOLED panel, but for the price, it just about does its job and leaves you asking for more. The camera on the Capture+ however performs like the ones on any other good budget smartphones provided the light is optimal. Flipkart promises 7 hours with 15 minutes of charging, but that is debatable. In our testing, the phone charged up to 60 percent in an hour, which isn't really the fast charging standard.

As far as dual cameras go, it's best to pitch a little more money to get the Xiaomi Mi A1. At its highest price of Rs 12,999, the Billion Capture+ can be passed over for a 64GB Xiaomi Redmi Note 4 or if it can be stretched a little higher, the 32GB Moto G5 Plus is available at Rs 13,999, which is quite the value for money.
