- PSU CORSAIR RM650X 650W
- Power Backup APC BX1000CI-IN Back-UPS 1.1kVA, 230V

Apple admits slowing down older phones

A hot topic of discussion across various threads was Apple admitting that it had pushed out updates that slow down older devices so that the users do not face any performance issues.

It was performance affecting the user experience. So you run a demanding application, and the phone keeps shutting down. Like that.

This is not something that remotely bothers me as an Apple user. I do not care to know about the details. I trust Apple to the best when it comes to user experience. Cannot speak for other Apple users though.

All of this could very well be avoided if DIY replacement of battery was easy and there was a notification when battery degradation got too high 🙄
