

WILL AI TAKE OUR JOBS?

THE INDIAN JOB SCENARIO IS QUITE UNIQUE, BUT DOES THAT MEAN IT IS SAFE FROM AN AI TAKEOVER?

Arnab Mukherjee | arnab@digit.in

It's 7am, Monday and you wake up like clockwork. The good old alarm clock is pretty much the only thing that's still analog in your house apart from you. As you get up to start preparing for office, the low hum of the automatic home-cleaner tells you that it's in the last stage of its work cycle for today and will dock itself for charging soon. The cooking bot that you

hired last month has prepared your meal, calibrated precisely for the nutrition you need based on your metabolism, and left for the day. Looking out of the window, you see the security drones patrolling your building more efficiently and diligently than any human security personnel ever could. The ease of everyday life since AI powered bots and gadgets took over most of it brings a smile to your face as you

bring up your email on the display in your living room. The first subject line you read makes you drop your cup in shock – they've fired you from your role at your workplace and replaced you with the latest automation software.

Seems right out of a science fiction novel, or does it really?

While it would be interesting to go in depth into which parts of the above fictional scenario are likely
