

EVOLVING AI

CONTRARY TO POPULAR OPINION, AI ISN'T GOING TO BE "CREATED" IT WILL EVOLVE...

Agent001 | agent001@digit.in

If you asked me, I'd tell you that we don't have AI yet. Although the first story by Robert in this collection does make some very valid points about AI, and how it is essentially different from us, I still don't think we're there yet. I don't often agree with Booman, but I have to admit he has a point for demanding a cutoff for when you call something "intelligent". While some will raise the bar too high, and claim only humans

are intelligent, others might lower the bar far too much, and claim that bacteria are intelligent.

Then there's the whole problem of sentience – a philosophical nightmare to define in itself, given that we don't truly understand our own consciousness yet.

My own view on the topic is that we will never *create* an AI – pay close attention to the "create" bit. I hope by the end of this article you will agree with me.

Creation

A common retort to claims of creators is to ask who created the creator. It's something those that follow the evidence and accept evolution have asked plenty of times. This, of course, isn't anything like a fundamentalist's arguments against evolution, it's trying to draw a parallel between the evolution of life and evolution of AI.

The fact that evolution happened is established with millions of points
