

THIS IS TECHNOLOGY, CULTURE AND SCIENCE WITH A DIFFERENCE, AND THAT DIFFERENCE IS USUALLY ENOUGH TO MAKE MOST NORMAL PEOPLE GO "WTF?"

Geek-key

AI IN SCI-FI

here's your cheat sheet to learning about AIs from science fiction through the years that were made famous for one reason or another. You can't call yourself a geek unless you know this stuff, so flip to that story ASAP.

Page 90

Baby born from 24 year old frozen embryo

A woman recently gave birth to a baby girl who was frozen as an embryo back in 1992. Emma, was born normal and healthy without any complications. She also holds the record for the longest frozen embryo to come to birth. Her mother would have been only a year old when the embryo was frozen. Quite the story to tell at family gatherings!

WHAT'S NEW

The Batman Effect

In a new research, as written by the authors in a study called "The "Batman Effect", it was found that children (aged between 4 to 6) were able to focus better on a given task if they were asked to reflect on the task as if they were another person. Asking the child to reflect on the task as Batman (or any other significant character like Bob the Builder or Dora the Explorer), it was found that they spent more time on the work task as opposed to the distraction (which in this case was an iPad) when they were pretending to be someone else.

King Tut's Space Dagger

New research suggests that rare iron weapons and jewelry made during the Bronze Age are actually crafted and made with iron from outer space, which was probably carried to Earth by meteorites.

The reasoning behind this is thought to be the idea that it was unlikely that artisans from the

Bronze Age knew how to make iron by smelting it from the Earth's crust.

It is thought that the iron dagger found in Pharaoh

Tutankhamun's tomb in Egypt is one such weapon. The dagger dates back to around 1350 B.C., which is a good two centuries before when we think the Iron Age began.

Using X-ray fluorescence spectrometry, it was found that the iron in King Tut's dagger contained 11 percent nickel and traces of cobalt. This is a characteristic that's been common in many of the meteorites that have fallen to Earth.

Star Wars in Space

While all of us down on Earth got to see the new Star Wars movie, residents of the ISS (International Space Station) will have had to wait to get back to Earth to watch it. But, NASA is arranging for the astronauts to be able to watch the movie while in orbit!

The Michelangelo of MS Excel

Japanese artist Tatsuo Horiuchi uses the most unexpected canvas for his masterpieces, which is given away by the title of this box – Microsoft Excel. The level of detail in some of his works is astounding. Who needs MS Paint anyway, right?
