

SHOWCASE

Caviar iPhone X Tesla

When it comes to turning already expensive stuff into even more expensive stuff, look no further than Russian luxury customisation brand Caviar. This time around, they've come up with a variant of Apple's latest iPhone, the iPhone X.

Normally, when you think Caviar customisations, you're thinking gold-plated, or jewel encrusted, or like their last customisation, a mink-fur wrapped iPhone X. But no, this time it looks like their modification is quite functional. Of course, like with all their customisations, the price is still quite hefty.

Anyway, the customisation in question is an iPhone X which charges itself. You read that right. The iPhone has solar panels

built into its back and will charge the phone whenever it's exposed to sunlight. The phone has been aptly dubbed the Caviar iPhone X Tesla and company says they drew inspiration for the phone from Elon Musk, Nikola Tesla and the late Steve Jobs.

It's worth pointing out that the design is quite minimalistic,

especially when compared to their previous customisations. The phone will be enclosed in a titanium case with a gold trim. There's no word on when the phone will launch officially, but it's being priced at 259,000 Rubles (₹2,84,500 approx).

Somnox

Somnox is a sleep robot. On the surface it looks like any small peanut-shaped pillow or cushion but it can actually help you sleep better.

Somnox guarantees that with it you will fall asleep faster, sleep longer and wake up naturally. How does it accomplish this? By using breathing regulation and audio.

The robot 'breathes' or rather simulates breathing when you're holding on to it. It has been proven that calmer breathing rates lead to improved relaxation and can even reduce stress. The robot's breathing actually causes you to adjust your own breathing to synchronise with it.

The next feature Somnox provides is audio. Not the invasive kind, remember the goal is to put you to sleep here. Somnox has a number of soothing audio tracks, like the sound of a beating heart, light lullabies, guided meditation, and if

none of that floats your boat, you can upload your own audio. Somnox automatically adjusts the volume and even turns it off eventually when you've fallen asleep.

Like with most gadgets today, Somnox comes with its own app. Here you can set personal preferences to help you get the best sleep possible. Somnox is covered with soft material and is shaped ergonomically with comfort being the top priority. Think of the Somnox as a teddy bear which will help you fall asleep and even help you wake up. The creators plan to eventually add AI to the robot, to further improve the experience, your sleep.

Xapo Bitcoin Vault

Cryptocurrency has been all the craze of late, and rightfully so. One need only look at the rate at which its value has been on the rise. It shouldn't come as a surprise that everyone is pining to get in on some of that cryptocurrency goodness. The most popular of the lot is of course Bitcoin, whose value has been skyrocketing.

It's a given that those who are investing in Bitcoin want their investment to be safe. There are a lot of Bitcoin wallets out there than guarantee your cryptocurrency's safety. One of them is Bitcoin wallet Xapo, which was founded by an Argentinian entrepreneur

named Wences Casares. Xapo takes Bitcoin security to the next level. Xapo has physical cold storage vaults built inside a decommissioned military bunker located somewhere in the Swiss mountains (of course they won't disclose the exact location). The bunker is 320 meters deep in the mountain and has walls over a foot thick. It's also under 24x7 video surveillance and is protected by all kinds of biometric scanners. Furthermore, it's constantly under armed guard. The vault supposedly holds

Bitcoin stashes worth well over millions of dollars. The facility was originally built in 1947 by the Swiss military as a secret headquarters during the Cold War. The Cold Room where all the Bitcoins are store is encircled with steel slabs to protect against electromagnetic pulses.

If we had to store our Bitcoins anywhere, it would probably be here.
