Garmin Fenix 5S

If you immediately start walking in the other direction when you hear the words 'GPS multisport watch', thanks to the usual bulk and cumbersome looks associated with this category of wearables, the Fenix 5S is going to change that. In contrast to the flagship 5 and the heavily loaded 5X, the 5S is a distinctly lighter and more user-friendly alternative. That being said, the 5S is in no way a compromise over the 5, packing the same set of features and capabilities that the flagship Fenix range has always been known for.

The smaller chassis sports the familiar button design and a silicon strap that is one of the most skin friendly ones we've used so far. One of the places where it falls short of its bigger siblings is the screen resolution, being stuck at 218x218 while the others have been bumped up to 240. But for a watch that clearly focuses more on functionality than pretty screens, it's good enough as all information, including your highly detailed workout

metrics, as well as notifications are visible pretty clearly.

The Fenix 5S, paired with the Garmin app, even lets you create your own workouts with a high level of details on the metrics to be tracked. But talking about the app, that is one area where Garmin can improve a lot. The same approach that makes their Fenix range no-nonsense multisport trackers makes their app cumbersome and unintuitive to use. While it does

offer you a host of data about all kinds of metrics and lets you get new watch faces and more, it might sometimes get difficult to get to where you want to go in the app.

The watch quite easily gives you a battery life of more than a week with mixed usage. If you're a light user then you'll probably get even more, but then we would wonder why do you have a top-end multisport activity tracker anyways? As we mentioned earlier, this is probably one of the few Fenix watches that you won't feel like taking off right after a workout, so give this one a try if bulk was the only thing that was keeping you away from the Fenix range.

SPECIFICATIONS:

LENS MATERIAL: Glass | **BEZEL MATERIAL:** Stainless steel | **CASE MATERIAL:** fiber-reinforced polymer with stainless steel rear cover | **STRAP MATERIAL:** Silicone | **DIMENSIONS:** 42 x 42 x 15 mm | **WEIGHT:** 67 g | **Water rating:** 10 ATM | **DISPLAY:** 1.1" (27.94 mm) 218 x 218 pixels Color display | **MEMORY:** 64 MB | **PRICE:** ₹54,990

Belkin Qi Wireless Charging Pad

The Belkin Qi Wireless Charging Pad uses Qi-certified transmitting coils to charge your phone wirelessly. All you need to do is place your phone (screen facing up, obviously) on the charging pad and it will start charging. There's an LED indicator which lights up to show you if your device has been placed and aligned correctly and is indeed charging.

Of course, for the wireless charger to work, you need to have a Qi-enabled device. So unfortunately, this won't work with most budget and low-end smartphones. For the time being, only the iPhone 8 and above, the Samsung Galaxy series – Galaxy S3 and above – and the Nexus and Nexus 7 smartphones are compatible.

The Belkin Qi Wireless Charging Pad has an output of up to 5W, and is accompanied by a 1.8 metre Micro-USB to USB-A cable. In terms of looks, the wireless charging pad has a small footprint and is quite slim. It's light too, so

carrying it around is no trouble, you can just slip it in your pocket. The design isn't too bad either and won't seem out of place when used with the fancy high-end phones it's meant to be used with.

This wireless charger is also compatible with most light-weight phone cases. So you don't have to take your phone out of its case each time you want to charge it. The LED indicator has different lights that indicate when your phone has been optimally aligned.
