

Toreto Atom TBS 320

The Toreto Atom TBS 320 pocket speakers are designed with portability in mind. It was fairly easy to connect the TBS 320 to our phones via Bluetooth; we didn't have any trouble pairing with the device. However, you can connect to the speaker via aux cable as well if you prefer.

The first thing that stood out about the TBS 320 was the volume. For its size, this speaker packs quite the punch. However, in terms of sound quality, it's not that great, and sounds quite flat for the most part. A lot of the background instruments and sounds are drowned out, but let's be honest, you're not really expecting high quality audio from any speakers at this price point.

The TBS 320 comes with an inbuilt microphone, so you can send and receive calls using the device as well. When using the device to make calls, we found the mic to be fairly decent. When we did get complaints about our voice sounding muffled, it was because the battery was low or we'd ventured too far from our paired phone, so it gets a pass.

In terms of looks, the TBS 320 is sleek. It has a black rubber and aluminium finish, and is quite decent looking. It's got two textured buttons on the side, the longer of which is used to control the volume, and a second smaller button for power on/off, and is also used to accept or cut calls. Long-pressing the '+' or '-'

end of the volume button doubles as next and previous track respectively. On the side you will find the aux input port along with the mic.

The device promises 6 hours of playback on a full charge. And it will let you know when it's low on charge by annoying you with a constant beep while it's on.

SPECIFICATIONS:

MODEL: Atom | **CONNECTIVITY:** Bluetooth, Aux In, Mic | **BATTERY:** 800mAh | **OUTPUT:** 5W | **BLUETOOTH RANGE:** 10 Metres | **PRICE:** ₹1,599

Riversong Wave BP

It's been said enough, but we'll say it again – there are a *lot* of wearables out there!

Companies have come and gone in India's volatile wearable market. A new entrant, Riversong, introduced its range in India earlier this year, and we got our hands on the Wave BP tracker.

Right out of the box, the Wave BP seems to be just another fitness tracker with the usual silicone strap and body in black. It actually does have most of the usual features like step tracking, heart rate monitoring, notifications and more along with one additional feature – blood pressure tracking.

No, it doesn't measure BP, so don't be fooled by any of these wrist devices that claim to be able to do so. More often than not, the devices offer you the ability to enter your measured BP at any given time using an external sphygmomanometer (those things that measure BP at the doctor's office). And this allows you to save other data along with BP data – your heart arte

and SpO2 levels etc. Sometimes these devices ask you to enter BP and then correlate your BP to your heart rate and guesstimate your BP. This is dangerous, especially if you actually have BP problems. This device does the latter, so don't trust its BP readings, and don't buy it for that use.

There are no physical buttons on the tracker, giving it a sleek appearance. It's rated as IP67, so it should be fairly safe

to take it into the shower. While it's nice to be able to charge it via USB, doing so needs you to tug the band off and put it back each time, which might affect the longevity of the tracking unit itself.

It's a decent activity tracker in its price range, and offers a decent experience, with a pretty decent app. One problem with the app is the persistent tracking notification in the notification shade, which can only be removed by force-stopping the app which ends up losing data. Apart from that, it's a decent tracker.

SPECIFICATIONS:

CPU: Nordic nRF51822 | **STANDBY TIME:** 2 - 3 days | **SENSOR:** IXTJ2-1009 PDYO-0IC-TR7 | **SCREEN SIZE:** 0.87 inch | **WEIGHT:** 19g | **CHARGING VOLTAGE:** 5V | **BLUETOOTH:** 4.0 | **WORKING TEMPERATURE:** -10~45°C | **BATTERY TYPE:** Polymer lithium | **BATTERY CAPACITY:** 70mAh | **WATERPROOF:** Yes | **PRICE:** ₹2,988
