

RED Hydrogen specs

The Hydrogen will come with Snapdragon 835, 4500 mAh battery, USB Type-C, hybrid SIM tray and a headphone jack.
<http://dgit.in/REDHydro>

about the cost price, they'd still find people drawn towards the traditional TV. At the end of the day, it comes down to this giant cone of unusable area in front of the projector which is a huge waste. There absolutely no way that I can sit around with a projector knowing that I've just marked

out 5-6 square meters of space to be unusable. If projector manufacturers can build an extremely short-throw 4K LCOS projector like the Sony LSPX-A1 or the Dell S718QL for about the same price as your average 4K TV, then you have my attention and my money. If not, I'll stick with my TV. **[4]**

BUYING ADVICE

CCCHHAARACCTTER REPETITION

Q Hey, I recently splurged a little and got myself a new mechanical keyboard. It's the ASUS Cerberus MECH. It did take me quite a while to get used to the new keyboard but of late I've started seeing a lot of unnecessary key repetitions. It's not happening with all keys, just the U key. And now

ASUS CERBERUS MECH

I'm finding it very irritating to type with the new keyboard. Is this normal? Should I RMA the keyboard and get something else?

—Sachin Iyer

A Hey Sachin, key repetitions are not normal in a new keyboard. Before you blame the keyboard, make sure it's not something to do with you since this is your first mechanical keyboard. Open notepad and press each key with the exact same force and see if repetitions occur with the U key or any other key. If they do, then it's too early for this to happen. Often, we see key repetitions happen a couple of years into the keyboard's life or sometimes, it's because there's a bit of gunk between the key and the shaft, a little cleaning can sort it out. Even after cleaning, if the problem

persists, talk to product support. There is a way to reduce key repetition in the OS. You can open Keyboard Properties in Control Panel and reduce Repeat Rate and Repeat Delay. Provided you've kept the key pressed, Repeat Delay is the time it takes before the same letter is input again. Repeat Rate is the rate at which the input happens over and over again. Your problem should be solved by a bit of cleaning and lowering Repeat Delay.

GAMING LAPTOP FOR ₹70K

Q Hey, I am a fan of your website! Can you recommend a gaming laptop for around ₹70k?

—Diyab Riyaz

A Hey Diyab, For your budget, the Acer Helios 300 should be a pretty good gaming laptop. It's one of the few units that gives you a GTX 1050 Ti at ₹63K along with an SSD. Another good option is the FX553 from ASUS, however, you'll get a GTX 1050+i7-7700HQ and no SSD for a higher price. If you're looking at

Acer Predator Helios 300

pure FPS, then the Helios 300 would be the better choice.

I'd suggest that you wait for upcoming sales to make your purchase since there are going to be a lot more discounts around that time. Also, not all models are available online so it would be prudent to pay your local retailer a visit. **[4]**
