

FLYNX

Scrolling through social media, you probably read a lot of web articles. However, there's a gap between tapping on the link and the webpage finally loading on your web browser. If you don't want to lose those precious seconds, you should be using Flynx. This web browser app opens up links in floating bubbles that loads in the background while you continue scrolling through your feed. Setting it as your default web browser will enable you to save articles in the app by double-tapping on links. Your saved articles can also be synced with your Google account. But if you don't want to use the save for later feature, you can always opt for Pocket.

FOREST: STAY FOCUSED

Although using a smartphone allows you to multitask and be productive, it's also responsible for a lot of distractions. The only way to avoid them is to restrict yourself from using your phone. You will find several apps that lock you out for a limited time, denying access to your apps. Forest is one app that gamifies and rewards you in exchange for the time you spend not using your phone. The main idea is to grow a plant in your "productive" time when you aren't using your phone and if you're successful, the plant grows into a tree. Do this everyday, and you'll be able to grow a forest eventually. You can set different time periods and if you leave the app mid-way, well, your plant dies.

LOOK UP

There must have been times where you came across a new word while using an app. Naturally, you would open up a dictionary app or do a quick Google search for its meaning. Wouldn't it have been easier if you didn't have to leave the app? Look Up is a pop-up dictionary that lets you search for the definition, pronunciation and synonyms of the selected word. The only shortcoming of the app is that the text has to be selectable, so you can't use this app for Facebook, Twitter or Instagram, unless you're accessing them from a web browser. This app is really useful if you read a lot of online stories. It can also be used in messaging apps. Look Up didn't work with other floating window apps when we used it.

It's high time you
threw all your
procrastination
into the bin
and finally got
productive

SLEEPO

While working, some people prefer to listen to music, while some prefer ambient noise. Ambient noise helps them concentrate better on their work. However, ambient noises are more harder to come by than you think. Sleepo is a great alternative that contains all the ambient noise samples that you might need. Whether it's rain and water, nature and forest, city and household, or just samples to relax and meditate. You can play them on loop simultaneously to up to eight samples. And if you like any of the combinations, you can create a mix and save it. The next time, you can play them directly instead of picking them again.

TODOIST

A productivity app compilation isn't complete without a to-do list app and we recommend Todoist. Lists are created under individual projects and in the free version you can create up to 80 projects – more than enough for one user. For example, if you create a project called Personal, then you can add all your personal tasks such as cleaning your PC, reading a book, watching a movie, etc. In the free version, you can also include up to five people per project. But if you want to get access to more features such as task labels, reminders, comments, file uploads, etc, you will have to pay for the annual subscription. The app also gamifies task completion by rewarding you with points or 'Karma', giving you a score.
