Rapoo VPRO V510

Entry-level mechanical keyboard with a spill-proof design

Price
₹3,999

FEATURES.....	47
BUILD QUALITY.....	72
VALUE.....	81

T

argeted towards budget or entry-level gamers, the VPRO

V510 manages to offer the basic features required for gaming.

Additionally, it incorporates a spill-proof design in order to prevent damage from accidental spills. Hence, if your lifestyle includes a lot of eating and drinking on your PC table, this might just be the keyboard for you. However, we aren't sure to what extent the keyboard is spill-proof since the website doesn't mention any IP certification.

The entire assembly is housed inside a plastic chassis which has a texture similar to brushed-aluminium that prevents fingerprints and oil impressions to an extent. The ABS keycaps are manufactured with double-shot injection that will ensure longevity. The V510 incorporates Rapoo branded blue mechanical switches which supposedly have an actuation force of 50 g and a lifespan of 60 million keystrokes. This is the first time we've experienced these switches and they feel more clicky and louder compared to Cherry MX Blues.

No software support is present but different functions such as changing the lighting effects, toggling the Windows lock key, muting, and toggling game mode, all can be done from the keyboard. We didn't notice any input error or visibly glaring problems. For a more affordable alternative, check out the Zebronic Max Plus.

Razer Basilisk

A competitive advantage over the DeathAdder Elite

T

he only appealing and functional feature for FPS gamers on

the Razer Basilisk would be the sensitivity clutch or the sniper button. It's a removable clutch available in two different sizes, so that one can lower the sensitivity when needed. An additional feature which we loved is the customisable resistance on the scroll wheel. Essentially, you can increase or decrease the resistance or steps in the scroll wheel to suit your preference. Apart from these two features, the rest are pretty basic that you would find on any other gaming mouse in this price range. The Razer Synapse

software has been improved drastically and it's now easier to navigate and change the mouse settings. Creating different profiles with different RGB lighting effects and macros is also possible on this mouse and we're certain that quite a few gamers look forward to such features. You can store multiple such profiles on the mouse and switching between these profiles is convenient as well.

The Basilisk uses the Razer 5G or PMW3389 optical sensor that's been quite the consistent performer in our benchmarks. Enough for us to recommend it for FPS games competitively. Razer even boasts about the durability of the Omron micro-switches which are reportedly good for up to 50 million clicks. The mouse has a brilliant ergonomic design that allows you to hold it comfortably in a palm or claw grip. If you aren't a fan of the sensitivity clutch then you could simply go for the Razer DeathAdder Elite since it houses the same optical sensor and enjoys the same set of software features as the Basilisk.
