

512GB microSD card, the biggest yet

Integral Memory has come out with a new microSD card which has a storage capacity of 512 GB, the most so far. <http://digit.in/512gbsdcard>

Drone saves two from rough seas

A drone was able to rescue two people off the coast of Australia by dropping them a flotation device. <http://digit.in/dronesaver>

Synology DS918+ NAS

User-friendliness first

Synology is known for their user friendly NAS solutions. And they're user friendly

because of DSM, the OS that runs on their devices. The Synology DS918+ is an upgrade to the DS916+ since it has a better CPU in the form of the Intel Celeron J3455 and has more RAM out of the box. However, the biggest change would be the addition of two M.2 NVMe slots for caching.

The Synology DS918+ is light weight for a 4-bay NAS. And that's mostly because the chassis and mainboard mounts are the only metal parts in the body. Everything else is made of plastic. The only exception appears to be the rear panel which is

made of metal. The inner chassis is metal and quite rigid. However, the trays are all plastic which is really unexpected for a NAS this expensive.

Performance wise, the Synology DS918+ shows considerable lead in most of our benchmarks for

4-bay NAS units. It would appear that the M.2 caching SSD certainly helps

with higher performance in our office productivity and content creation benchmarks. When it comes to raw data transfers, we are limited with the bandwidth limits of CAT6 cabling.

We ran some video streams straight from the unit to four devices simultaneously and they all played perfectly fine without any buffering.

The Synology DS918+ is a really great performing NAS device but has a build that's really unexpected given that it costs ₹83,000 in India. Like all Synology devices, the UI and the apps are what you're really paying for. On top of that, this is the only NAS with two M.2 SSD slots at present which makes it quite unique.

—Mithun Mohandas

SPECIFICATIONS

CPU: Intel Celeron J3455 Quad Core | RAM: 4 GB DDR4 | BAYS: 4 + 2 slots for M.2 SSDs | HOT SWAP SUPPORT: Yes | I/O: eSATA, 2x USB 3.0 | LAN PORTS: 2x Gigabit | WEIGHT: 3.95 kg | FAN: 2x 92 mm | WARRANTY: 3 years.

Nikon D850

Nikon's new versatile champion

The Nikon D850 is essentially a follow-up to the much acclaimed D810, but is much closer to the flagship Nikon D5. It is powered by a 46-megapixel backside illuminated full-frame CMOS sensor, along with the latest generation EXPEED image processor and a 153-point autofocus unit. This is further paired with a 180,000-pixel metering system, and all of this enables for 7 FPS RAW continuous shooting with AE/AF lock, and the continuous shooting speed can bump up to 9 FPS with an added battery grip.

On the performance front, the Nikon D850 shows exemplary colour and white balance accu-

racy, along with best-in-class dynamic range. This makes for an incredible range of colours, which further enhance the level of accuracy of colours in subjects. The Nikon D850 also gets an ISO 64 mode, which allows it to shoot in extremely bright conditions. Furthermore,

the BSI sensor means it can also shoot in much lower light.

The Nikon D850 also gets an electronic front curtain shutter that allows for shooting quietly and even mirror-up. Alongside, this is the first full-frame prosumer Nikon camera with ease-of-usage features like a 3.2-inch tilting LCD display, backlit keys and SnapBridge. However, SnapBridge only works when the camera has 85 percent or more charge, which is disappointing. That aside, the Nikon D850 is hands down one of the very best DSLR cameras that you can buy in the market today.
