Centipede toxin identified

Scientists have identified the toxic that lets giant centipedes kill prey 15 times bigger than they are. <http://digit.in/killercent>

Canon EOS 6D Mark II

Bridging the gap

Canon's initial idea with the original EOS 6D almost six years ago was to bridge the gap between high-spec crop-sensor cameras, and the mighty EOS 5D. With the 6D Mark II, the idea has remained the same, while Canon has played catch-up to industry trends. This aims to fill a void in terms of sensor resolution, speed of shooting, ease of usage and core performance, in essence attempting to provide a camera that shoots like a professional camera, but is much lighter and easier to wield.

On this note, the new 26-megapixel Dual-Pixel full-frame sensor performs fairly well in terms of colours, although a tinge of oversaturation is still persistent. Nevertheless, it performs well when it hits the sweet spot, with decent dynamic range producing appreciable colours. The dynamic range suffers as you shoot in very low or very high ISO, and continuous shooting is not the fastest. It also borrows the 45-point all-cross-type autofocus mechanism that should technically perform very well with faster lenses, but comes off a little sluggish at times. Its area of coverage is also a little less.

That said, the Canon EOS 6D Mark II is possibly one of the most convenient full-frame cameras to shoot with right now. The plastic body does feel a bit flimsy for its class, but that's a trade-off which reduces the weight of the camera, and that along with an excellent touchscreen and very good battery life, helps it achieve its target of being a user-friendly prosumer DSLR camera.

—Souvik Das

SPECIFICATIONS

SENSOR: 26-megapixel full frame Dual Pixel sensor | AUTOFOCUS: 45-point all cross-type | VIDEOGRAPHY: 1080p at 60fps | ISO: 100, expandable to 102,400 | CONTINUOUS SHOOTING: 6fps RAW | CONNECTIVITY: Wi-Fi, Bluetooth and GPS

Comio C2

Being basic

Like the majority of devices coming out in the sub-₹7K category, the Comio C2 sticks to the basics. Design-wise, it seems like a smartphone from 2016 with a touched-up exterior. The Comio C2 also employs an IPS LCD display which has decent colour reproduction and is just bright enough (560 lux) to make it usable under normal lighting conditions. That said, the display is not very legible under direct sunlight. The touch response and the overall touch experience is just as good as any other phone in this price category.

The phone which is powered by a MediaTek 6737 SoC, which combined with 2 GB of RAM provides just enough performance to offer a decent experience for the price. The sluggishness and the lag in performance are easily visible while switching through apps or when loading more than two tabs in the browser (Chrome). Like the performance of the phone, the battery life isn't something great, even though the 4000 mAh battery rating put it right beside most of its competitors. In normal daylight conditions, the camera manages to capture a decent amount of details. The dynamic range is average at best, but you can tweak that a bit by turning on HDR mode. The front-facing camera is again average at best whether you are taking selfies in low light conditions or in broad daylight.

The Comio C2 then is not the best budget smartphone you can buy today as that crown is still retained by the Xiaomi Redmi 4. However, the phone does make a good case for itself. It is average at everything and not really bad at anything. This makes it a viable option for someone who has a tight budget and can live with a slightly slower smartphone. The phone is not meant for heavy users, but then again at this price, nothing is.

—Hardik Singh

SPECIFICATIONS

SOC: MediaTek 6737 | GPU: Mali-T720 | OS: Android 7.0 | CARD SLOT: microSD (up to 128 GB) | SIZE: 5-inch | RESOLUTION: 720 x 1280 pixels | CAMERA PRIMARY: 8 MP | CAMERA SECONDARY: 8 MP
