

Oreo 8.1 public Wi-Fi speed

Google has enabled a new feature in Android 8.1 Oreo that lets you see how fast a public Wi-Fi network is before you connect to it. <http://dgit.in/OreoWiFi>

DJI Mavic Air

Drone maker DJI has unveiled the DJI Mavic Air, a portable drone that fits in your pocket. <http://dgit.in/2BoIkF6>

ested in sports which would require an agile design. On the other hand, they also offer visual customisation, giving the disabled an option to keep a naked cast, one matched to skin tone, or one covered with artwork. According to Cherian, the success of the company has resulted in enquiries from several foreign nations as well.

KICKSTART CABS

Getting around the city in a cab or a taxi might sound like quite a menial task to you, but it is not the same for the disabled. Cars are not typically built with them in mind, but that does not mean that they don't need to get

An accessible cab service by Kickstart Cabs

around. Bangalore-based Kickstart Cabs is designed as a disabled-friendly cab service that has quite a few useful features to help the disabled in getting around the city.

First of all, they have a seat that rotates to protrude out of the car, so that a person with a walking disorder can still enter and exit the cab normally. A particular type of cab has an access ramp and locks to help people on wheelchairs come into the vehicle. In some models, the chair can also be unlocked to function as a wheelchair itself. Even on the backend, thoughtful features, like texting a deaf users instead of calling them, make you sit up and take notice

The ride tariffs are pretty reasonable, being between ₹30 to 40 per kilometre. They offer their services for package trips, office drops, airport drops as well as outstation trips. Just checkout their demo at <http://dgit.in/KkSCabs> and see for yourself how simple yet amazing this is.

OSWALD LABS

Started off as Oswald Foundation back in 2016 by then 18-year-old Anand Chowdhary and 15-year-old Nishant Gadihoke, Oswald Labs today has become one of the leading companies when it comes to accessibility technology. Over the last couple of years, they've built some amazing software solutions that have one aim - to make life easier for the disabled.

Agastya is a solution to be used by web developers to easily incorporate accessibility features into the websites they build. Just adding one line of code in Javascript, you get a customisable accessibility widget that will also show you usage statistics and more. Apart from night mode, blue light filter and Dyslexia-friendly mode, Oswald Labs is also planning to make Agastya smarter by adding the ability to add automatic image tags on web sites.

Valmiki is similar to Agastya, as in it offers all the same features, but just as a browser extension. Once installed, the disabled person gets a lot of customisation to make it perfect for their use case.

But perhaps the best of their projects is the upcoming Shruvan OS. A smartphone OS that has been designed end-to-end with accessibility in mind,

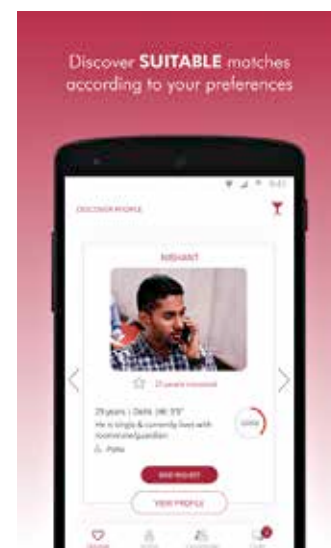

Shruvan OS

the OS comes with a patent pending speech and vibration interface that makes it suitable for just about anybody - and any smartphone.

INCLOV

Despite everything, a big issue with disability in India is the social stigma associated with it. Disabled people are considered inferior by a segment of society, and that makes it difficult for them to find education, jobs and even love. Solving one part of that problem is what started off Inclov.

The Inclov app

It is a one of kind platform to find love, one which takes into account disabilities and health disorders and helps people find partners who can take care of their needs. Each person signing up on the platform can specify details like level of independence, cure availability and more. The app itself is designed with accessibility in mind through its screen reader and talkback features aimed at people with visual impairments. Inclov has also organised events dubbed Social Spaces, where people, disabled or non disabled, can come together to socialise in an environment that keeps accessibility in mind. You can check out Inclov here: <http://dgit.in/InclovApp>.

ENABLE TRAVEL BY COX AND KINGS

Technically, this is not a startup but Enable Travel is solving a big problem by providing travel solutions for the disabled. Tour and travel packages on the platform have been designed by the disabled for the disabled, with impairments in vision, hearing, mobility and speech being taken into account. Some of the facilities they provide involve wheelchair accessible vans and specially trained staff and caregivers.
