Vogmask

Iogmask is a filtering respirator which claims to be able to provide protection from airborne particles as small as .3 microns. The attempt was to make filtering respirators look stylish. It definitely looks like they succeeded. At least, we certainly found the pair we received to be fairly stylish.

The mask has certification from regulatory agencies around the world and has worked with medical engineers to guarantee product safety, performance and quality manufacturing. It is present in over 41 countries around the world. Vogmask is Korean Ministry of Food and Drug Safety Certified KF-94, Personal Protective Equipment Certified KN95, and Certified for CE Mark Personal Protective Equipment – filtering half masks for particles.

The mask helps protect from airborne particles such as dust, pollen, shavings, contaminants etc. It also protects from particles found in air pollution. The mask can also help reduce exposure to airborne biological particles.

There's two Vogmask variants, a single valve mask option, and a

two valve mask option. The valve in the mask is a small disc present on the Vogmask that acts as a one-way exhalation valve.

The valves also acts as a means of exit for moisture and CO₂ from inside the mask. Within

each valve is a carbon

filter. The mask itself is

made out of organic cotton and is soft and comfy to the touch.

One of Vogmasks biggest appeals is the number of options you have to choose from when it comes to design. There's a LOT of designs to choose from and we guarantee you there'll be at least one design you might fancy.

KZ-ZST IEM

KZ or Knowledge Zenith is a Chinese IEM company that not many people know about. They specialise in making budget earphones, but unlike most budget IEMs, their offerings are considered to be of pretty decent quality, especially for their price. It's quite unfortunate that more people do not know about the brand. The KZ-ZST is the company's first hybrid IEM offering.

In India, prices for the KZ-ZST vary depending on the retailer. You can get a pair for as low as ₹800 at some places and go all the way up to ₹3,000. Last we checked, they were going for ₹1,999 on Amazon. Your best bet is waiting for a sale to grab them at the best possible price. We found the best prices for the ZST on Gearbest and Ali Express.

The ZST has rather large housings with a dynamic bass driver and armature treble

driver within each housing. The large size might pose some trouble for those with smaller ears but overall we found them pretty comfortable for long hours of use during our commutes.

The earphones come with detached cables; we had a little trouble attaching them to the earpiece. Also, the cable quality isn't that great but it's passable for a budget piece. You might want to consider getting a better quality cable since you have the luxury of being able to switch.

Upon using the IEM we noticed that the bass and the vocals sound boosted on the ZST. Those who are not too fond of bass might not welcome this but fans of bass who frequently listen to genres like rock should enjoy this. We'll do a more thorough review of the IEMs soon, so look forward to that.

It definitely sounds better than most budget earphones we've tried so we have no trouble recommending this if you find a retailer willing to sell it to you at the right price.
