

VOLVO XC60 REVIEW: A NOTABLE INSCRIPTION

The 2017 Volvo XC60 is deeply impressive, and comes with technologies that are well beyond what any other car maker provides in India right now.

Souvik Das | souvik@digit.in

SUVs are pretty much the only type of cars that sell in India these days, and the luxury segment is no different. At this point, the 2017 Volvo XC60 arrives in India with everything that you would expect from luxury SUVs – classy interiors, fancy LEDs, a fairly powerful engine and a lot of leather and wood. While all that sounds perfectly suited for the luxury SUV customer in India, what the XC60 really stands out for is the level of technology that it brings to the mid-sized luxury SUV segment.

INFOTAINMENT SYSTEM

Volvo's Sensus interface is seamless and easy to operate. There are three main screens along with a drop-down notifications panel that serves alerts on

driving dynamics and other prompts. The first screen includes FM/AM/Radio favourites, CD, Bluetooth, USB and iPod for audio sources, Sound Experience, Message prompts, car status, driving performance, a download centre, and Apple CarPlay and Android Auto.

The second screen shows the integrated sat-nav, audio source, phone controls and the in-car internet connectivity status. This is the screen that you'll mostly be accessing, and the layout is easy to figure out. The third screen is the hub for all car functions, including all the advanced car functions, parking assist, the 360-degree camera, HUD, seat and headrest adjustments, and more.

Each tab is further denoted by a green label when the feature is switched on, enhancing the ergonomics. The large size of the display also means that all the text is very clearly visible, and the muted colour theme ensures you aren't

distracted. It's neat, and one of the best designed systems in terms of looks, ease of usage, and premium feel.

ADVANCED DRIVER ASSIST

On a well-marked road, the Volvo XC60's radar, sensors and cameras easily recognised the lane markings, and the steering makes micro adjustments by itself to keep you within a particular lane. It is not visibly apparent, but you can spot it when you take your hands off the wheel as you approach gentle curves. You also get blind spot alerts on both the side view mirrors, which beep and blink red simultaneously to alert you if a vehicle is approaching.

Furthermore, you get distance and speed maintenance, where the car's sensors automatically gauge the speed of the car in front of you and its trajectory, and maintains distance. This makes a lot of difference on long highway cruises. It even slow down by itself when it recognises approaching cars.

The road sign recognition helps you focus on the road, while bringing your attention to the speed limit. It also
