

### Over 30 iPhone class-actions suits

Over 30 different class action lawsuits have been filed against Apple for the iPhone performance throttling. <http://digit.in/AppLS>

### Bitcoin mining used to grow food

A startup is growing fish and foodstuff by repurposing the heat generated from mining bitcoin. <http://digit.in/bitfood>

# FutureCon

'I'm in love with the shape of you,  
Push and pull like a magnet do...'

Tabitha Thomas | [feedback@digit.in](mailto:feedback@digit.in)

**THE AUDIO DEVICE** on my new Hummington 6.7 DGI was giving me trouble for the last few days now. And it's the last thing I needed with the conference coming up. My dial was stuck on the retro music station, playing songs from 40 something years ago when cryptocurrency was a relatively new term. Yep, 'those were the days', or so they said!

I stared at the long line of space-o-cars in front of me. If only Mars had better parking facilities, I wouldn't be late for my first ever event on the planet and perhaps the most important one.

The cyclops valet held the door open for me as I stepped out, onto the silicon red carpet. The nanoparticle-fused ticker on the side of the carpet glowed with the itinerary for the conference. As I walked down the carpet, the waiterbot offered me a tray of welcome drinks all flashing the name, Virgin Elixir. "Bad for my insides", I said as I politely refused to have anything that could ruin this important day for me.

I walked forward admiring the natural beauty of a more recently inhabited planet when Olympic Mons in the distance lit up with a message that said 'Interplanetary Realty Show 2070'. It reminded me of what a big deal this was. People were more excited to bag a spot here than when they won a few trillion on the lottery! I couldn't believe I was lucky enough to be the youngest representative my company had ever sent here!

"Ahhh, Mark, there you are", said Frank Gerbert. The last time I met him was on Earth, before his days as CEO of the Real Estate Commission Of Saturn. I took his outstretched hand and couldn't control the broad grin that split my face. And my nervousness. My company, Rover Constructions, needed to secure a partnership with the Commission and Mr. Gerbert was the man who could make it happen. Securing this deal would give us unfettered access to the one of most valued properties in the entire solar system. It would also forever secure my future if I made this happen.

"Are you ready for today?" he asked.

"Born ready, I responded, as he motioned for me to walk towards the area of the conference that I had been waiting for with bated breath - The Travel Zone.

As a real estate broker on the Earth and its moon, I was no stranger to understanding architecture. But this was my first opportunity to actually travel to other planets.

"Please place your arm here", said the secur-i-bot as he scanned my wrist for my embedded invite chip. As the machine beeped and flashed my name, he slipped a ring on my finger and motioned for me to join Gerbert.

"Which one would you like to check out first?" he asked.

"Let's do your new home - Saturn", I replied. There would have been no better way to see a planet than with an almost-local. Yep, that's what we were called once we colonized a planet other than Earth.

"What now Mr. Gerbert", I asked.

"Call me Frank, please. Just press the button on your ring. You'll find the shift slightly uneasy at first but the feeling will pass in about five Earth minutes".

"See you there", said Frank as he pushed the button on his ring a fraction of a second before I did.

I looked around me. Darkness. The total kind. I felt someone pushing me, but ever so lightly, as I glided further. Around 2 minutes later my legs landed on something harder. I was there. I was on Saturn! It looked exactly like the holographs that Mrs. Gerbert had uploaded on Aetherbook!

"Let me show you around", said Frank. I followed him readily. I could hardly contain my excitement about being on the third most populated planet in the solar system. I had heard of their famous replica of the Leaning Tower of Pisa, built as a tribute to the one we had on Earth before it finally fell over suddenly 25 years ago. And the famous Villas of Bunchack - the legendary houses that sold for 700 trillion Ringlets each.

I couldn't even do the math to understand how much that was in Earth dollars, all I knew is that it was a ridiculous sum. The brokerage earned on selling just one of those houses would mean instant retirement and a cushy life for someone like me! We walked past a store. I tapped my wrist to get details, and the beacon in the shop sent over info to my retinal chip so that the signs hovered over the sidewalk.

"Garment Store", I read out loud. "I need a jacket. I'm freezing", I said as I stepped indoors.

It was unbelievable how hard the conference committee had worked this year. When they had announced the new and improved Travel Zone, we had expected a few tweaks. But this upgrade was unexpected. You could now experience changing weathers during this virtual yet oh-so-real tour of neighbouring planets.
