

PC: The Curious Case of Win Start Button

Ever wondered what goes on behind the scenes, when you press that Win Start button and get the pop up? Within that microsecond's delay, here is what your system undergoes. Read on...

PROCESS INITIATION

1

After the Windows key is pressed, a scan code is generated. Scan code is the binary code related to the key pressed on the keyboard.

GENERAL PASSING THE BUCK TO THE GUNNERS

5

The Explorer calls the OS to display the output on the monitor. OS reads RAM and sends the output to the video memory of the graphics card (The Gunners).
