

Kaspersky's suite has an anti-theft feature

their work across multiple systems and devices, the importance of safeguarding sensitive corporate data can't be underscored enough. This is why you have to equip your smart device with a security app to give it a fighting chance of combating the risks that are prevalent in today's digital world.

Features offered

Good news. The number of security apps and solutions offered on popular smartphone and tablet platforms has been steadily rising since last year. A smartphone security app is a jack of many trades, offering tools and

Norton's app has the most fluid UI

McAfee's suite allows you to wipe data

services that are tailor made for the platform and device. Virtually every major security suite vendor has an anti-virus and malware scanning tool built-in, along with protecting your privacy.

Nearly all of them have an anti-theft module, which helps you locate the coordinates of your lost phone, and call and SMS filter. Some security apps also let you send SMS commands to either lock your phone or delete all sensitive data from it. Others offer features that automatically lock a phone when its SIM card is removed. If there's one thing they all do, apart from protecting your device from malware, is to go to huge lengths to safeguard your personal and professional data on the device, make sure it doesn't get compromised.

Since paid subscriptions to most popular security apps only cost about Rs. 500 or so, securing your smartphone is quite cheaper than your PC -- plus it's nothing compared to the thousands of rupees splurged on the smartphones themselves. The peace of mind ensured by having an antivirus app running on your smartphone is worth the trouble of hunting it down and installing it on your mobile device.

Coding and spreading a malware on smartphones is substantially difficult than attacking Windows PCs, but the threat persists and by all indications it's only going to rise. So do yourself a favour and protect that smartphone. **d**

Element of Success

Add a little attitude to all your presentations with iBall's 2.4GHz Wireless Presenter. Probably the most powerful presentation tool an executive will ever hold!

- Built-in laser pointer.
- USB Micro Receiver.
- Left & Right button for Previous & Next Slide.
- Toggle button to switch between two applications.
 - On/off switch to save battery life.
- Can be used as a mouse with Trackball & Left click button.
- Blank Screen button to draw attention towards the speaker.

lappie time... happy time..
