

Google Cloud Print updated

Google Cloud Print now supports two more vendors – Canon and Fedex – as well as a new Print to Android (PDF) feature <http://dgit.in/K1eDaW>

Ever wonder why...?

As humans evolved why did we continue to have hair on our bodies? It acts as a motion sensor for alerting us to insects, like bedbugs, before they bite us

DIY

easy and reasonably priced. BigRock.in because we also wanted to include an Indian provider and the 'Google App for Domains' method because of the features it provides including free Gmail inbox/ calendar and other services hosted on your domain. So yes you can have a Gmail account with 'firstname@yourdomain.com' for free once you register the domain.

Starting with www.name.com, you should check the availability of your desired name through the site. If it is available you can buy it right away. If not the service will automatically suggest and search alternatives like what_you_searched.in or what_you_searched.net or the what_you_searched.com and so on. Select the one you like and buy it with the standard procedure of buying from an internet store. During checkout you can choose if you want to buy hosting or other services like SEO optimization from name.com, if you think you don't need them, you are probably right. You would find that the registration (only first year) of ".in" domains would be your cheapest options. It would be worthy to note that only first year registration of .in would be at the discounted price of USD 2 or USD 3, after first year their renewal would be again at the standard price of USD 8-10 depending on the service.

Once you have registered a domain name, you would need to set it up so that it redirects to your hosted content. For name.com go to the home page, at the top menu bar, click on Account. This will list all the domains you own. Select the domain you want to edit or setup. On the right hand side, in the "Control Panel" section click, "DNS Record Management" and edit the entries to reflect your hosted

IP. Most importantly you should edit the CNAME records, you might want to edit / create the CNAME entries for both "your-domain.com" and "www.yourdomain.com" separately.

BigRock.in is another option for you to register a domain. Along side hosting, they also provide a basic site builder for which you don't need to code a single line. It is a browser based drag and drop tool which looks quite well suited for beginners. They also provide limited but free email accounts with the domain name you register.

To give website builder a spin go to <http://www.bigrock.in/website-design/index.php> and select the "Try our Free Demo now" link. You can choose the design, layout, content and to some extent even modify the available design and layouts. It is all graphical and has a drag and drop interface.

If you are in love with Google products such as Gmail, Calendar and Groups, and have wondered if you can get them on your custom domain name, then Google Apps for Domains is for you. Best of all in the first year it is free with Domain registration and has Zero setup.

Start by going to this link <https://www.google.com/a/cpanel/standard/new3> which also gives you the option to link up your existing domain if you have any. Otherwise for Rs. 500 (approx 10 USD) you can get a domain, 10 custom Gmail accounts and much more. Definitely a worthy option to explore.

So far we've covered regular websites but these days no mention of web-presence can be complete without looking at setting up an e-commerce solution. www.buildabazaar.com is a good zero-setup

solution to look at. You will save considerably on time and expense as compared to rolling out your own e-commerce solution or if you lack the expertise then even rolling out an existing open source solution (more on that later).

BuildaBazaar offers good pricing and being associated with infibeam.com, your products can be displayed at infibeam.com website and you can also offer the sell the products of infibeam.com on your site, with both options earning you commission. The Payment Gateway fees are also low as Buildabazaar gives you a group deal. There's lesser paperwork and technical hassle and instead of five to ten percent they are charging three percent.

Using Google Analytics

So far so good, now that you have got online, the next natural curiosity is to know how many people are seeing your efforts, where are all they are coming from, what time so on and so forth, to accomplish this you should install Google Analytics on your website. To do this, first go to <http://www.google.com/analytics/>. Over there log in with your current Google account or create one if necessary, once signed in click on the "Admin" link on top left, next click on "New account" fill in the required details, it would be advisable to choose "One domain with multiple sub-domain" when asked.

At this point on the bottom pane it will automatically generate a code for you, the next step is to simply copy paste this code in the head section of each page of your website. No other configuration needed. If your site is using a global template, simply add it there. Google Analytics can be integrated with
