3D or LED TV?

I want to buy a TV, but can't decide between a 3D TV and regular LED TV for long use. Which one is better? Also, please suggest a good brand and model (I'd prefer Sony). My budget is around ₹1 lakh and I won't be bending it!

Prateek Yadav

3D TVs and LED backlit LCD TVs are the same, 3D TVs just have a faster refresh rate as compared to normal LED backlit LCD TVs, so as to display 3D video content. There's a big debate around 3D TVs right now. You have manufacturers bringing out 3D TVs left, right and centre.

Sony KDL-46EX720

Barring a few 3D movies, there isn't much original 3D content around for you to completely enjoy the experience. Only if you're into 3D gaming, then they makes sense. The active shutter glasses are expensive and using them for long duration leads to headaches or dizziness among some viewers. LG is the only brand which has passive 3D glasses.

Sony, LG and Samsung offer a good 3D experience, but like we said there's lack of original 3D content. Sony KDL-46EX720 makes for a good buy at ₹94,000 offering 3D and smart TV features such as internet video, Facebook and Twitter. If you just want a 3D TV with passive glasses then the LG 42LW4500 at ₹80,000 makes for a good choice.

Gaming rig within 50k

I want to build a gaming rig with a ₹50,000 budget. Please don't include the cost of monitor, keyboard, mouse, speaker and Windows.

Rahul Kukrety

Opt for this configuration:

- **Processor:** Intel Core i5-2400 (₹11,100)
- **Motherboard:** MSI H67 MAE35 (₹4,850)
- **RAM:** Gskill F3-10600CL9S-4GBNT (₹1,200)
- **HDD:** Seagate 500 GB 7200.12 (₹4,300)
- **Graphics Card:** ASUS GTX 560 (₹10,800) or EVGA GeForce GTX 560 Ti Superclocked (₹15,300)
- **PSU:** Corsair GS 600 (₹4,000)
- **Total:** ₹36,250 (with GTX 560) and ₹40,750 (with GTX 560Ti)

LED TV with DLNA

I want to buy a 32-inch LED TV (LG/Samsung). I have a smartphone with DLNA feature so my budget is around ₹35k. The three main criteria are:

- Full HD support
- DLNA certification
- HDMI ports

Srikanth MV

LED backlit LCD TVs will be difficult with your budget. We suggest checking out these LCD TVs which fulfill your requirements: Samsung LA32D580K4R (₹36,000) and Samsung LA32D550K1R (₹35,000). Among LG TVs for your budget, you'll get LCD TVs, but they don't feature DLNA.

EVGA GeForce GTX 560 Ti

IT shopping in Nepal

I live in Nepal and there are very few options available for IT products. I have two requests. Firstly, I want a graphics card for playing latest games such as *Battlefield 3*, *COD*, *GTA* etc.

My PC configuration is as follows:

- **Processor:** Intel Core I3-540 @ 3.06 GHZ
- **RAM:** 4 GB (3.64 usable in 64-bit ultimate Win 7 – suggest to improve this)
- **Motherboard:** Gigabyte H55M-S2V

My budget is only ₹7,000-8,000. Also note that besides products not being available here, the prices are also higher; for example, GTX 550ti costs ₹11,500. Also, only PSUs of Goldkist and Jdkee are available. So which would be a better option? Both cost roughly ₹1,500. Can they run the suggested GPU along with my PC decently?

Secondly, I need a phone that costs roughly ₹9,000. The prices are nearly of the same level and also not many phones are available. I want a responsive touch-screen, and Android is preferable.

Jatin Rungta

HTC Explorer

For the graphics card, you can go for HD 6750 which is available for around ₹7,000 in India. If you can stretch your budget, you can also get the latest MSI R7750-PMD1GD5/OC which is available for around ₹7,500. As for the power supply, anything over 400W is good for your system. The Corsair VS 450, for instance, costs around ₹2,100. But check with the local dealers in Nepal regarding brand availability and pricing. You might have to increase your budget if you want a proper branded PSU.

At around ₹9,000, we feel that the HTC Explorer and Samsung Galaxy Y S5360 make for decent buys. Both these phones sport Android 2.3, 2MP (Samsung) w and 3MP (HTC) cameras, 3-inch (Samsung) and 3.2-inch (HTC) screen size, respectively.
