

and the rest of the files into the C:\Windows\System32\ folder on your Windows 8 machine.

- Download Microsoft Game Patcher from <http://dgit.in/SreEOu> on your Windows 8 machine and run it. Your games will now be patched and you should be able to play them.
- Make sure that you only transfer 64-bit games from Windows 7 to a 64-bit Windows 8 installation, and 32-bit games from Windows 7 to a 32-bit Windows installation. The patching process will not function otherwise.

Running applications as a different user

Running applications as a different user in Windows 7 was

easy, all you had to do was hold down shift and right-click on the application you wanted to run and the option was there. In Windows 8 however it's been disabled. To enable it again:

- Open the run dialogue by hitting [Win]+[R]
- Type gpedit.msc in the box and hit OK.
- Go to User Configuration > Administrative Templates > Start Menu and Taskbar
- Click on Show Run as different user command on Start and enable it.
- To make sure the policy takes effect, hit [Win] + [R] again and type gpupdate /force
- Now whenever you right-click on an application you will see a "Run as different user" option.

Creating a portable version of Windows 8

Unlike previous versions of Windows, Windows 8 comes with an in-built option to install and run the OS from a USB drive. Note that these steps are only applicable with the Windows 8 RTM version. Users of the preview versions might not be able to access this.

To enable this:

- Plug in a USB drive (preferably one with 16 GB or more storage capacity) and format it.
- Insert your original installation media, a Windows 8 bootable USB drive or DVD that you used to install Windows 8 on your PC. If you don't have one, you will need to create one. Head over to [http://dgit.in/wIn-](http://dgit.in/wIn-8rPins)

8rPins for instructions if you do not know how.

- Go to your Control Panel (right-click on taskbar)
- Search for the "Windows To Go" option and click on it.
- Choose your formatted USB drive from the device list and hit next.
- You will be prompted about BitLocker encryption and it is up to you whether you want to use it or not as it is not essential.
- Just keep following the instructions and keep hitting next. When your settings get finally confirmed, hit create and your drive will be made.
- You can now boot into a portable version of Windows 8 when the USB drive is plugged in!
