# Zen Ultratab A100

## An entry level budget tablet

The device has quite a slim form factor measuring just 10.5mm in thickness, and light too at 295gm. The rear of the device has a black matte finish which makes the device resistant to fingerprint and dust and also gives it a good grip.

On paper the specifications of the device are the same as the Micromax Funbook but the performance isn't at par. The device has good features and hardware but compromises on a SIM card slot, Bluetooth and GPS. Users can access 3G via a USB dongle though. The device also has a 2800mAh battery.

The Ultratab comes pre-loaded with apps such as

*Astrology, BSE/NSE, documents to go, dictionary, boroscope, Bollywood, nexGTV, and more.*

Videos ran very smoothly everything from MP4 to MOV and even MKV files. No hiccups. Travelling on the timeline of the videos too was smooth and the device didn't have any lag. The performance of the onscreen keyboard was good to type on. The overall performance of the display wasn't the best though.

The viewing angles are off and it is very susceptible to glare. The preloaded skin on the device made the performance laggy. Games such as *Angry Birds Space*, *Temple Run* and *Amazing Alex* all ran quite well.

Browsing the Internet on the device was a mixed experience. The websites loaded quickly enough but the navigation was troublesome due to the laggy nature of the device. On continues video playback, the device lasted for 3.5 hours.

At the same price, the Micromax Funbook and iBerry Auxus AX02 are better options.

# Sony XPERIA Go

## Rugged phone, cramped keyboard

The phone is really slim at 9.8mm and really light weighing a mere 110gms. Even though the resolution is low, the Bravia engine makes it look crisp and vibrant. Below the display rest three touch sensitive buttons – back, home and menu. It runs on Android 2.3 Gingerbread but is upgradable to ICS.

All the ports, including the SIM Card slot, are covered sealing them from dust, a nice touch. The rear of the device feels like plastic but it's made of polycarbonate, which is actually quite sturdy.

It has a 5 MP camera with an LED flash. The camera on the device is quite good with great images even in low-light

conditions. The Sony XPERIA Go comes with its own custom skin which isn't the best, but it isn't bad either. If you are one who is used to the TouchWiz UI or the HTC Sense UI, you may find the Sony skin to be a bit lacklustre.

The interface of the device is very smooth considering the RAM is just 512MB. Games and apps on the device were very smooth. Multitasking on the device worked well and the call quality was good. With our average use the device lasted for about a day and a half.

The keyboard was a disappointment. It feels cramped and even though predictive text helps, it isn't enough. We've seen far better layouts.

If you are looking for a phone that can take a beating and survive in dust and rain you can take a look at this device along with the Motorola Defy Plus.
