

Lenovo Store launched in Chennai

Currently, Lenovo has a strong footprint of four exclusive stores in Chennai. Lenovo has exclusively partnered M/s Ziptech Infosolutions Pvt Ltd for the new store

A The 1200+hrs shown is just a bug in the program. The WikiTaxi importer will normally take about 1-2 hrs to import the database judging by the indicated speed in your screenshot (1200-3000 pg/sec). Don't worry about it, that is perfectly normal and even we saw that same estimated time period when we were trying out the software for ourselves.

Laptop BIOS password ?

I have forgotten my laptop's BIOS password. How do I go about recovering it? Please help me out.

Ashwin Kumar

A The laptop's BIOS password can be reset in the same way a desktop's BIOS password is reset. Go through the following steps.

1. Switch off your laptop
2. Remove the power cord
3. Remove the battery pack
4. Read the laptop's service manual to figure out from where the CMOS jumper is accessible.
5. Open the laptop's plastic chassis and short the CMOS jumper for 5-15 seconds, for additional instructions refer to the laptop's manual.

If you cannot find a CMOS jumper then you can remove the CMOS battery for 15-60 seconds and reset the password. However, removing the CMOS battery will reset all settings so you'll need to enter the BIOS menu and load the default settings once you are done with the reset.

The CMOS battery should look somewhat like the image below.

Restoration blues

I am Prasanna and I recently restored my computer to an earlier time. When I restored the PC, I was unable to uninstall the softwares I had installed. My anti-virus was not working and when I tried to install

a new anti-virus, the system is hanging. I was not even able to uninstall my current anti-virus solution. I tried doing it in the safe mode. But the problem still exists.

Prasanna Mohan

A Your restore point stores data pertaining to your

- Registry
- Files in Windows File Protection
- Local user profile

So when you do restore, you'll lose the registry entries related to the software installed within the restore point's time period. So the uninstall shortcuts will cease to exist and those files will no longer be linked to each other. You'll have to either undo the last restoration to get them back (your earlier problem will most likely resurface) or delete them manually and then reinstall the software.

Navigate to the software directory manually and try running the uninstallation executable. As for your Anti-Virus, go to their web site and you'll find the removal tool. That should remove all traces of the particular anti-virus. We've put down links to some of the more popular anti-viruses.

- AVG - <http://dgit.in/UJRcSD>
- Avast - <http://dgit.in/PnQBfS>
- Norton - <http://dgit.in/SYLg3Q>
- Bitdefender - <http://dgit.in/QiJxAm>
- Kaspersky - <http://dgit.in/U8FPI3>
- Trend Micro - <http://dgit.in/QiJN28>

Netbook acting weird

I have an Acer Aspire One D255 netbook having an Intel Atom processor @ 1.6 GHz, with 1 GB RAM. After I played your DVD on my netbook and installed AVAST antivirus my netbook is acting weird. Whenever I try to turn it on, it hangs. I cannot seem to get anything working. Please help me out.

Abhishek Roshan

A Did you by any chance happen to install two anti-viruses on your laptop? Multiple security suites are known to meddle around with each other to wreck system performance altogether. Enter safe mode and remove AVAST. Press F8 just before the Windows startup logo comes on to enter safe mode. **A**
