HP OfficeJet Pro 8600 Plus

An ideal candidate for your office needs

Apart from offering the standard print, scan and copy functionality, the 8600 Plus also offers ePrint – where you assign an email

ID to the printer and send print jobs from anywhere in the world; AirPrint – which allows you to print content off your iOS devices; Wi-Fi – which allows you to print over your Wi-Fi network and so on. The OfficeJet Pro also comes with a 4.3-inch touchscreen which acts as the operational panel. Mastering the operational panel does not take much time.

The 8600 Plus comes with a USB port as well as memory card slot for quick off-the-camera printing. It supports auto-duplex printing and also on the automatic-document feeder tray on top.

Considering it is an OfficeJet Pro series AIO, it offers high speed prints. For text printing it took

12.97 secs and highlighting with a marker will not leave behind any smudges. High quality mixed document printing was also quite fast at 24.12

secs. Colour copying took 14 seconds. It even printed an A4 glossy photograph under 2 minutes. While the print quality is great with paper colour prints, the glossy A4 photo print wasn't that great as we noticed graining in certain regions of our test print.

While the printer costs ₹20,000, the colour cartridges are priced at ₹1,565 (for

1500 prints) and ₹1,455 (for 1100 prints).

For home users there are more economical options available. The 8600 Plus is ideal for a small home-office setup as it gives very fast speeds and good quality prints.

WD My Net N900 Central

An exorbitantly priced, feature-packed power-house

The WD My Net N900 Central is an unusual router in the sense that it is one of the first one we've come across that comes with an in-built 1TB or 2TB HDD.

The router itself is exceptionally endowed with just about every feature you would need from a router, including "cloud" access, NAS, parental control, gigabit ethernet ports, etc.

Setting up the router was a breeze. But, we couldn't run the initial setup by just navigating to 192.168.1.1 as we normally would on a router and had to actually run the installation CD and setup the router completely before being able to access it. The process is quite straightforward and WD has taken care to ensure that the visuals are self-explanatory and allow even a layman to setup the device with ease. We quite like the web UI of the router and it is

among the more elegant and faster interfaces we've seen so far. Setting up the router for "cloud access" or even mobile access via the app (Android and iOS) was also very simple and required not more than a couple of very simple steps.

We would have liked to see more USB3.0 slots instead of the single USB 2.0 slot given the extremely high price of this device. USB 3.0 won't really matter over Wi-Fi,

but it will make a huge difference over LAN. That said, accessing a USB drive over the network was painfully slow.

The performance of the device was strictly average for a dual-band router and in the same league as the ASUS RT-N66U. Not a bad router by any means, but we feel that the price tag is overly exorbitant and it would have probably been better off as a simple dual-band router.
