**LG reveals new Ultrabook**

LG introduced their new Ultrabook called the U560 which has an IPS based 15.6-inch LCD, 1.8GHz Core i5 CPU and a dedicated GPU

✉ Some years ago, Digit rarely published content that would be useful to software developers. I had written to Digit about this, and though my letter was never published, a few months later, Digit did become a bit software-developer-oriented. Whether this was a result of my letter to Digit or not, I don't know, but now I'm happier. There have also been Fast Tracks dedicated to software developers and I've taken full advantage of them.

I'm a Software Developer myself working for an established UK-based software company, and I've been using the software-developer-oriented software and other material (tutorials etc.) provided by Digit, extensively.

Please provide an index file (Even a basic PDF file would do) to help us locate all software (and other content) that has been provided in the recent past by Digit in its DVDs.

Sameet Natekar, Mapusa, Goa

4 We've had a few iterations of a software archive, but none of them were good enough. You can check out our forum at thinkdigit.com/forum where we provide a DVD manifest every month.

Anirudh

✉ You guys are doing a great job! I've been reading Digit since the past few months and now I'm completely hooked.

The Yays: The language you use is great and I easily understand complex concepts. You guys have added new sections; keep it up. The Fast Tracks are a complete hit. The layout of your magazine is impressive. The snippets atop every page are awesome.

The Nays: I thought the cost was ridiculous when I first saw it. It turned out to be worth it, but please reduce it. The web site is a complete mess. The NewBoston tutorials included in a DVD were a complete godsend. Please include all the remaining tutorials.

Atheesh Krishnan

4 Thank you for taking the time to give us feedback, we really value it. Thanks for the "Yays". As for the Nays: With the price of things the way they are, it's hard

Feedback for the January 2013 issue of Digit

to keep costs down. Paper, printing and distribution costs have risen 1000 per cent or more since we started in the late 90s, yet the price of Digit has risen only 50 per cent – from ₹100 to ₹150. You won't believe the hoops we have to jump through to keep costs down. Web site design is very subjective, and what you hate, others love. That said we can surely improve if you send us some pointed and specific suggestions. We will continue to give those and other tutorials in our DVDs.

Robert

✉ This is my first letter to you guys. I've been reading Digit since February 2012 and now I'm a big fan.

My brother and I would like the following for our studies:

1. Video tutorials on Java EE (swings, servlets, JDBC, JSP, JSF, EJB, Hibernate, Struts etc.)
2. Video tutorials on .NET (C# and PHP)
3. In-depth knowledge of computer hardware, NTFS, file system, cache memory, buffer memory, over-clocking, etc. Also answer questions such as: What happens when a PC starts? What should be taken care of while formatting a PC and installing an OS?

I want to say thanks to you guys for

your fabulous work. Keep it up. Hats off for the job you're doing.

Prakash Singh

4 Congratulations! Your first letter has been published!

1 and 2) We've been providing tutorials on various aspects of programming over the past year and have included many a tutorial on Java and PHP and we will continue to do so over the coming months.

3) Well, the Windows 8 FastTrack that you're getting this month should get you off to a great start.

Anirudh

✉ I'm a Class X student and have been reading your magazine since 2011. I really love the latest snippets of tech news on the top of each page. I liked all of the reviews this month especially of the iPhone 5 & the Samsung Galaxy camera.

Awesome review of Far Cry 3 & HTC One X though I felt both products were underrated by you guys. Have you ever given a 90+ overall score to any product?

All articles based on the cover story rocked, though I loved 'The Ideal OS' and 'The Dark Horses' – two awesome stories back to back. Keep up the great work!

Akshat Pradhan

4 If a product is excellent it will score over 90, but we have very rigorous test
