

Karbons Data Bundle

Karbons Mobiles teams up with Bharti Airtel to offer a range of bundled data offers with the purchase of select smartphones

Dell's Post-PC

A hybrid PC-on-a-stick and streaming solution unit handling HD video encoding and decoding, running Android, <http://dgit.in/1009osH>

Cabinets Test

Corsair Carbide 400R

ishing. It has a meshed front bezel with two hot-swappable drive bays and a 200mm fan. The top of this case is also meshed and is removable. It has space for a liquid-cooling radiator at the top too. The left-side panel can be opened by just pulling a spring loaded latch. Inside, a cover hides the PSU cable clutter. It also has an extra, vertical PCI slot. The drive rails work very well and cable management is a also breeze. This enclosure being a mid-tower can still house an XL-ATX motherboard comfortably.

And others

We also got the Cooler Master Storm Scout 2 and the Antec Solo 2 for this test. The former is a proper gaming case which comes with most of the features

a good gaming case should have. Its design is great and the handles at the top allow you to carry this LAN-party-friendly case around. The contender from Antec is primed for silent computing users. It stays quiet using sound dampening material and silicone vibration absorbers. But due to its dimensions, there is not much space to work with in this case. Antec P280 was almost the same as the Antec Eleven Hundred but more of a silent computing case.

Category verdict

The **Best Buy** award for this category goes to the **Corsair Carbide 400R** for being a rock solid case with great attributes for the price. While manoeuvring inside this case, you won't break a sweat and
