case, so installing HDDs / SSDs or even 5.25-inch drives is easy. As for cable management, the C70 has smart clips at the back of the motherboard with pre-routed cabinet cables.

Category verdict

The Corsair Graphite 600T was a good contender but the **Cooler Master Silencio 650**

won the **Best Buy** award in this segment as it had more number of features at its disposal and provided decent performance compared to the others in the test. It also had an SD card slot along with the integrated fan controller and a dual-boot switch to select a boot drive between two different drives. The best part we found about

this case was that it was very sturdy and professional looking with a strong rubberised base. We didn't choose the Vengeance C70 as we thought that it was overpriced for the features it provided in this segment.

Full – tower cabinets

This section is for people who want to go all out with their case purchase and have amazing drool-worthy hardware at their disposal. It must be noted that these cases are huge and heavy – even when empty. Some of them may require you to sell a kidney, but hey they're awesome. These cases support XL-ATX and E-ATX boards and have enough room to house the most extensive liquid cooling components out there. Needless to say, we didn't run into any sort of trouble while installing components in any of these cases during testing.

Circle Herculean

This case propels Circle to the next level where other veteran case manufacturers tread. We received the white coloured one and it has an aggressive design element to it with sharp edges. Its front panel has a white frame with small divided clefts at the sides. It has a large side-panel window. The top of the case has hemmed vents which can

be opened or closed. The integrated fan-controller knobs lie on a brushed aluminium panel along with the ports. It also has tool-less PCI slots. With all these great design elements, its pin-holed reset button is something we couldn't fathom. This case is actually a copy or re-branding of the Rosewill Thor v2 available outside India.

Cooler Master Storm Trooper

No, this case has nothing to do with the cloned *Storm Trooper* characters from *Star Wars* as its name might make you think. Still, its design is what a stealthy case should be like. We emphasise stealth because Cooler Master has actually included a hidden and lockable box at the bottom of this case which can be used to securely keep your stuff when at LAN parties. Other than its design, it has tons of space, 90 degree rotatable HDD cages, a sturdy steel make, rubber-gripped carry handle for easy hauling at LAN parties, and an extra vertical PCI Slot called the "Storm Guard" for routing peripheral cables through it for security. Phew! It also has easy-to-remove front panels, space for a 240 or 280 mm radiator at the top and bottom, and lots of space behind the motherboard tray for cable routing. The built-in fan-controller works very
