The family resemblance with the Dell XPS 13 and the XPS 14 ultrabooks is very much there. The chassis is made from machined

aluminum, including the frame of the device and the display flip hinge. There is no lock for the display when in ultrabook mode, and sudden movement can dislodge it from the groove very easily.

Colour handling on the display is extremely good. The brightness level is adequate, somewhat like the HP Envy 4-1002tx. Auto brightness, when activated, makes a profound difference, something that isn't visible to this extent on most other ultrabooks.

The specifications are at par with a majority of the ultrabooks tested recently. And that shows in the benchmarks tests, which peg the

XPS 12 on the same level as the others, which include lesser-priced models. The PC Mark 7 test scores fall within a fair range – the XPS 12 scores 4734, while the Satellite U840 scores 4220 and the Samsung Series 9 scores 4647.

Excellent battery life on the XPS 12 – five hours in our benchmark test. In a typical usage day-at-work scenario, this could get you through the 8-hour day on a single charge.

You do pay a significant premium for the XPS 12. Better ultrabook options cost a lot lesser – HP Spectre XT being an example. Also, check out the Lenovo Yoga 13 before making the final payment.

The update gets crucial motion gesture improvements

On the outside, the look of the device is exactly the same as the previous edition. A fairly compact device, and the old saying "if it isn't broke, don't fix it"

hasn't been forgotten. The remote remains exactly as it is from the previous edition, but the critical bit is the much smoother and assured on-screen motion response.

The interface remains largely the same, but with the newer Ice Cream Sandwich OS. Horizontal scrolling in the UI works better now. There is access to the Play Store and even a secondary re-done app store. As an HD media player, it upscales standard definition content fairly well. But the issue still remains with the compatibility with certain video containers.

Improved undoubtedly, but still no match for the likes of the WD Live and the Boxee Box.

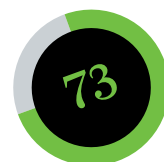

The interesting addition is the XBMC capability on the device, which pretty much makes this a unique proposition among

all HD media players that we have tested recently. Movies get a completely different angle with XBMC – summaries, fan-art, reviews etc., and there is no need to hook up a PC for that.

The unique features do add a premium to the price tag. If you need a robust HD media player for movie playback, consider the WD Live and the D-Link Boxee Box. But if the extras are what entice you more, go for the Evo Box.
