

LG's UHD TV sales story

Since the launch of LG's Ultra HD TV last year, it has sold about 300 of the 84-inch model in Korea

Mega launched

A cloud storage site called "Mega" which is the successor to the now closed file-hosting site MegaUpload was launched recently

ADATA XPG SX900 256GB

High capacity, decent speeds and a great price

SSD capacities are increasing with pricing becoming more economical. This is good news for system builders, as you not only get speed but enough space to pack in your heavy applications and games as well. After looking at Corsair SSDs couple of months back, we have yet another 256GB SSD in our midst – the ADATA XPG SX900 256GB SSD.

It comes in an all-black brushed aluminum finish body and has a 9.5mm thickness making it ideal to be used even inside a laptop. There are 16x16GB MLC NAND chips, eight on each side of the PCB along with a SandForce SF2281 controller. You get around 238 GB of usable space.

Price
₹13,500

We tested the SSD on our standard rig comprising an Intel Core i7-3770K processor, ASRock Z77 Extreme 4 motherboard, 8 GB Kingston DDR3 RAM and so on. Crystal DiskMark 3.0 gave a Sequential Read / Write score of 366 / 368.6 MB/s which is lower than the 440 / 471.3 MB/s seen on the Corsair Neutron GTX 240 GB drive. AS-SSD gave 4K read / write speeds of 19.15 / 47.24 MB/s which was slower than both the Corsair Neutron GTX, as well as Neutron SSDs. The random read/write performance was at par with Intel Series 335 SSD. While transferring within the drive, we got sequential / assorted file transfer speeds of 155.65 / 129.12 MB/s which is again lower than that seen on the Corsair SSDs whereas Intel Series 335 SSD is faster with assorted transfers.

At ₹13,500, it offers a very good cost per GB of ₹56, which is lower than the Corsair SSDs. If you are fine with comparatively slower speeds, this SSD gives you great value for money.

Intel Core i5-3450S

Mid-range performer

Price
₹11,000

This is a low-power quad-core processor clocked at 2.8 GHz and capable of going upto 3.5 GHz on Turbo Boost. It gave a score of 5.16 on Cinebench R11.5 and 29.06 FPS on x264 HD encoding. This is higher than the AMD A10-5800K and sufficiently lower than Intel's Core i7-2600K. It is slightly faster than Core i5-2500K but does not have unlocked cores. At ₹11,000 it is an ideal processor for a mid-range gaming rig. If you want an unlocked processor, the Core i5-2500K still offers good value for money.

IRIS Compressor Pro

Compressing files to a fraction of the original size

Price
₹4,999

It allows you to compress your heavy PDF, JPG, TIFF or PNG files to a compressed PDF file. It can convert upto 25 pages or images to a compressed PDF format. The text in the compressed PDF is searchable. It takes a while to compress but the resulting PDF is a fraction of the size of the original. We compressed 25 images amounting to 130MB to a mere 8.24MB in 121 secs. You can just right click on any image or PDF and convert it right then by selecting the IRIS Compressor from the drop down. At ₹4,999, it is definitely meant for a niche audience.
