We got our hands on the latest Windows 8 Pro sporting tablet from Dell – the Latitude 10.

It comes in an all-black body with a glossy front-finish and a matte-finish on the rear side. A 2.5 cm thick bezel surrounds the actual 10.1-inch display, which may seem like a waste of screen real-estate at first, but makes sense considering the gestures. The Latitude 10 houses an Intel Atom Z2760 dual-core processor clocked at 1.8 GHz and has 2 GB of RAM. This device is not meant to run heavy applications. Cinebench R11.5 was crawling when we were running the benchmark which is understandable as the processor is no match for the more mainstream Intel Core i-series processors.

The USB port allows you to connect your keyboard or mouse and use it as a regular laptop/

₹42,490

desktop. We connected a bluetooth keyboard and mouse to it and it worked fine. The finest example of how lag-free the response is, can be best explained by the fact that you can play *Quake III* on it without any lag.

The battery life is stellar giving a good five hours on stress testing. On normal usage, you can easily extract over eight hours from the Latitude 10 – a plus point for corporate users on the move.

While the hardware has no issues as such, the Windows 8 Pro had a lot of inconsistencies with apps. We found the Latitude 10 much more useful in the desktop mode than the modern UI as apart from native apps there are lot of issues with most of the other apps. At ₹42,490 it makes sense for business users who want the best of both worlds.

iberry Auxus CoreX2 3G

A stunning Jelly Bean tablet

The iberry Auxus CoreX2 3G is one of the first “next gen” budget tablets that we have seen. The best thing about the tablet is its display. The resolution is the same as the Nexus 7 at 1280x800 but its performance could have been better. Watching videos, playing games and reading text was a treat, but the typing experience and the response of the touchscreen felt lackluster. The power under the hood too is impressive and it will run all the apps from the app store with ease. Straight out of the box, it runs on Android 4.1 Jelly Bean. It also comes with a bunch of preloaded apps such as Office suite Pro, Chrome browser, Viber and more.

In terms of its UI you get the stock Android 4.1 Jelly Bean experience and that is a very good thing. From the lock screen,

you get access to Google Now, which is one of the key features of Jelly Bean.

The tablet is slim at 9.6mm thin and weighs 312gms making it a very comfortable device.

Multitasking too is a breeze and the device also boasts of the ability to make calls. The down side is that the onboard speaker is underwhelming. You

would be better off using a Bluetooth headset to make calls. In continuous video playback, the device lasted for 4 hours, which is standard for budget devices.

If you are in the market to pick up a budget tablet, we suggest you wait for the competition to catch up before making your buying decision. If you want to pick up a good tablet

for the budget of 10k, the iberry Auxus CoreX2 3G can be at the top of your list.
