The iLume is fairly pocketable, considering it sits on the palm of your hand. Its build quality is very good. The black and silver colour combination looks good. There is no shortage of input options - Proprietary cables take care of the component input source, VGA port and HDMI. Can play back media off the USB port or the micro SD slot.

From a distance of around 3 feet from the wall, the projection size was around 50-inches. Overall quality was excellent, with vivid colour reproduction. Fast moving object running across the screen on a bright/white backdrop, elicits some motion judder, but that isn't visible on a dark-ish backdrop.

Content that is originally in High Definition formats (we tested with 720p and 1080p) looks

brilliant. Among the portable projector category, this is the crispest video reproduction we have seen by far.

The iLume did fairly well even with ambient light trickling in. To double check, we switched on a 16W LED lamp in the room after sundown, and yet the viewing experience remained fairly acceptable.

The iLume did not play back certain video containers off the USB port. Built-in speakers are not enough for movies.

We are fairly impressed with the iLume projector. Also check out the BenQ Joybee GP2 because it offers a built-in battery backup and an iPhone/iPod Touch dock for media playback as well.

EAFT Destiny D90T

A budget Android tablet with an awesome battery life

One of the striking design elements of the D90T is that the rear panel looks surprisingly similar to the Samsung Galaxy Note 800 and that isn't a bad thing. The front of the device has a 9.7-inch IPS display which is fantastic to watch movies on. In fact it is great to read text as well along with impressive viewing angles. The 4:3 aspect ratio works well for browsing and reading but you loose screen real estate while watching videos. It runs on stock Android ICS 4.0.4.

The biggest downside to the tablet is the response of the touchscreen. It feels rough and lacks polish. Don't expect to type documents or even enjoy a game like *Dead Trigger* on this device. We wish the experience of the touchscreen were better.

A whopping 8000mAh battery powers the tablet and this is where the tablet is a performer.

In the continuous video playback test, it lasted for a whopping nine hours leaving the competing budget tablets way behind.

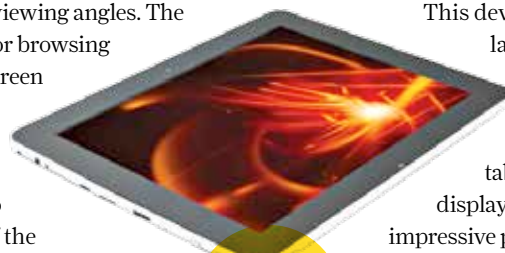

A lot of budget tablets are plagued with laggy response when navigating especially if you load the home screen with lots of shortcuts and widgets.

This device too is plagued with the lag, but it's comparatively less.

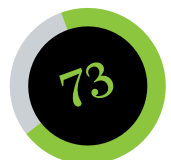

If it weren't for the underwhelming touchscreen we would recommend this tablet hands down. It has a good display as well as speakers and some impressive power under the hood. It almost gives premium tablets a run for their money in terms of the benchmark scores.

If a 10-inch tablet is what you are looking for, then you could check out the Zync Z1000, Karbonn Smart Tab 10 or the Spice Stellar Pad before making your purchase decision.
