WickedLeak Wammy Sensation

The budget hunter's Galaxy S III

Straight out of the box, the device has an uncanny resemblance to the Samsung Galaxy S III. Even the default wallpaper on the smartphone is the same one that you will find on the S III. That being said, the build quality of the Sensation is quite impressive. The smartphone also boasts of a 12 MP rear camera, but don't be fooled. Its performance is very underwhelming.

For its price, the device has quite impressive specifications. The power under the hood ensures that the device feels extremely smooth while multi-tasking and everyday use. Videos looked really good and the viewing angles were better than other devices in its class. Even while playing games and running apps, the device performed quite well. The display is crisp to browse the web and read text.

Price
₹16,000

Its earpiece is good for calls but the speaker is bad. It has really low volume especially for calls and multimedia content. In terms of battery life of the device, it will last you for about one and a half day of above average use.

For ₹16,000 the device is quite impressive in its performance. The battery life is good, display is large and comfortable to use but the audio output is quite poor. There are budget smartphones out there with better raw performance but they don't offer users a second battery straight out of the box. On the downside, the device is plagued with the occasional issue of hanging found on all budget devices. We suggest you take a look at the Karbon A21 as well as the Micromax Canvas A110 along with this device before making your purchase decision.

ASUS PadFone

Is it a phone, tablet or a netbook?

The phone is your run-of-the-mill 4.3-inch Android smartphone that is quite well built and works rather well but the keyboard on it could have been better. All the power rests in the phone. Place the phone in the tablet-housing unit, and you get a 10.1-inch tablet running Android. The tablet has a battery of its own and the processing power comes from the smartphone. Add to that the keyboard dock also houses a battery, and you have a device that is not only a 3-in-1 but also has a ton of battery backup!

The smartphone works very well, as good as any flagship smartphone available today.

The video playback on both the smartphone and the tablet was really good. The representation of colour was crisp and nice although the black levels were a bit lower than we'd like. The audio too was loud and clear.

The device also comes with a stylus. When in tablet mode, you can use the stylus to receive calls making you look like James Bond. It's very cool and works really well.

Price
₹65,000

As a concept the PadFone works well. It tries to bring the best of three worlds in one device, but at a whopping ₹65,000. If you are in the market to pick up a smartphone, you can get the iPhone 5 in this budget, or an iPad and a decent Android smartphone. It's not exactly a value for money product. But if you are the kind of person who wants one gadget to fulfill your smartphone tablet and netbook needs, you can totally consider picking this device up.
