

A touchscreen PS4 controller?

It's rumoured that the new Playstation 4 from Sony will have biometrics and a touch screen integrated on the controller. Read more: <http://dgit.in/XQEVFL>

Autodesk Smoke 2013 out

The highly anticipated professional video editing software from Autodesk, Smoke 2013, has started shipping. More info: <http://dgit.in/VITKQS>

a post-Kepler GPU serving up to eight simultaneous game calls.

Samsung Youm – Samsung showed off a prototype flexible OLED display called 'Youm' at its keynote speech at CES 2013, the predecessor to a whole new line of flexible displays. The company showcased many unique interface features for

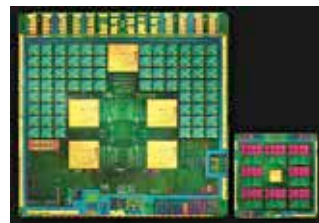

its technology, such as an edge display, a foldable book-like tablet that turns into a phone, and more. While Youm technology will not be making it to consumer tech very soon, it is exciting to see the major brands taking such interest in the next-generation of interfaces.

Qualcomm's New Snapdragon Generation

– Qualcomm announced a refresh for its line-up of Snapdragon system-on-chips, saying it would retire the S1, S2, S3 and S4 series of mobile chips, and release a new family of chips rechristened as - Snapdragon 200, Snapdragon 400, Snapdragon 600 and Snapdragon 800. The Snapdragon 600 and 800 will represent the high-performance chips whereas the Snapdragon 200 and 400 will be seen in low-end budget mobile devices. Snapdragon 600 will be running four Krait 300 cores (clock speeds going up to 1.9 GHz), and will be around 40 percent more powerful than the S4 Pro at the

same time consuming comparatively lower battery power and it will house the Adreno 320 GPU. The Snapdragon 800 will run four Krait 400 cores (up to 2.3GHz) with the Adreno 330 GPU, and deliver 74 percent performance gains over the S4 Pro.

Nvidia Tegra 4 – The Tegra 4 is being touted as the first commercial implementation of ARM's quad-core, cortex A15 architecture and shall be seen in smartphones, tablets and notebooks. Codenamed Wayne before launch, it has 72 Nvidia GPU cores, delivering roughly six times the GPU horsepower seen on the Tegra 3; along with a quad-core processor and a fifth low power core for minimising battery use in idle state (as was seen in Tegra 3). It also boasts of 4G LTE voice and data support through an additional Icera i500 chip (LTE is not onboard the Tegra 4 SoC). The four cores

are expected to run at speeds of up to 1.9GHz. It also supports HDR photography.

Intel's New Trails – At CES 2013, Intel showed off a new generation of Atom processors, codenamed Bay Trail, meant for tablets. These Bay Trail Atom processors should start shipping in devices from later this year. The company also showed off its Clover Trail+ platform, the Intel Atom Z2580 processor, which uses a dual core Atom processor with Intel Hyper-Threading Technology, apart from a dual-core graphics

engine, which will deliver 2x the performance of the Z2460. Lenovo, in the meanwhile, showed off the first device with the Clover Trail+ processor, the K900 phablet.

Huawei's 6.1-inch Ascend Mate

– Easily the biggest smartphone-tablet hybrid at CES 2013, the Huawei Ascend Mate's 6.1-inch IPS+ display with a 1280x720 pixel resolution. The device is powered by a 1.5GHz Hi-Silicon quad-core processor, 2GB of RAM, and a 4050mAh battery. It runs on Android 4.1 Jelly Bean straight out of the box, and is skinned with Huawei's Emotion interface. It has an 8MP AF rear-facing camera with HDR and 1MP HD front-facing camera for video calls. Huawei has also included proprietary Quick Power Control (QPC) and Automated Discontinuous Reception (ADRX) battery efficiency technology on the Ascend Mate. The device will be available in China in February 2013 in crystal black and pure white colours.

Acer Iconia B1-A71 budget tablet – Acer announced the budget Android 4.1 Jelly Bean Iconia B1-A71 tablet at CES 2013,

and brought it to India a little over a week later, at ₹7,999. The tablet boasts of a 7-inch display with a 1024x600 pixel resolution. Other specifications of the device include, the MediaTek processor (MTK 8317T) clocked at 1.2GHz dual-core, 512MB of RAM, 8GB built-in storage expandable via a microSD card. The Iconia B1-A71 also has a

2,710 mAh battery along with Wi-Fi 802.11 b/g/n, Bluetooth 4.0, and GPS.

Nvidia Project Shield – Apart from unveiling the Tegra 4 at CES, Nvidia had some other

announcements up its sleeve, the biggest being Project Shield, a portable Android gaming console in the prototype stage that is powered by the Tegra 4, and can support PC game streaming, provided Kepler GPUs are being used. Capable of being arranged as a tablet, it also folds out into a game pad and flip screen. The final form and feature set of the commercial version has yet to be decided. A part of the ecosystem required for cross-device gaming is Nvidia Grid, also announced at the event.
