Laptop overheating, partitioning woes to getting rid of unwanted messages...

We go through sos@thinkdigit.com to answer your distress calls

Laptop overheating

I purchased an HP G6-2016TX six months ago from Lucknow. It has Intel Core i5-3210M and ATI 7670M and has switchable graphics (which is turning out to be a pain). Off late when I play games (like Ghost Recon Future Soldier, Defense Grid) my fan makes a lot of noise. Checking with hardware monitor reveals that CPU temp reaches 100 deg C. This high temperature is freaking me out. Please advise me if it is safe to operate the laptop at this temperature. Else what should I do?

Archit Gupta

A If it is in the default mode, then the graphics will be switching to HD 7670M based on the game settings. In case you are running the games on integrated graphics, then it looks like the integrated graphics on your processor is finding it tough to keep up with the game settings you have. Hence, it's heating up. In case, you are running the games using the 7670M, and the CPU is still heating up, then that indicates that it is not being cooled properly. You can either get it

Cooler Master Notepal U Stand

checked at the service centre if it is still under warranty. Or you can get a good laptop cooler to keep the laptop running cooler. A good option is Cooler Master Notepal U. You can read more about it here in our online review: <http://goo.gl/PAqoq>. Worth the money.

Multiple issues

I have a couple of problems, but first here are my system specs:

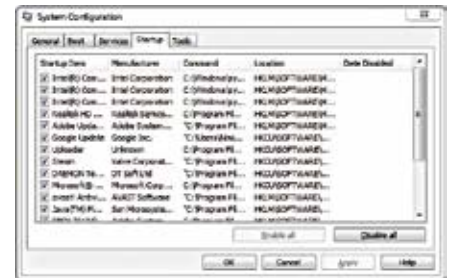

- OS: Windows XP Professional SP3
- CPU: Intel Pentium (R) E5300 @2.7GHz
- Motherboard: ASUS P5G41T-M LX (LGA775)
- RAM: ADATA DDR3 2GB @1333MHz
- HDD: 75GB SAMSUNG SP0822N (PATA)
- PSU: 450W

- 1) I've noticed that my system takes quite a while to start up. But occasionally it starts up quickly but the home screen takes time to come on. My dad says that it may be due to a faulty power cord and a lot of apps are set to start on start up. Is there any menu for it like on Windows 7? My HDD is almost 6 years old.
- 2) I used 'Speccy' which was bundled with the Digit DVD and it showed my RAM as: '2.00 GB Single-Channel DDR3 @ 400MHz (6-6-6-15)'. But both my RAM and motherboard are DDR3 1333MHz. Is it this that is causing the 1st problem? Everything has slowed down than earlier
- 3) Can I use my Sony Bravia 32CX420 Full HD TV as a monitor via the HDMI port of a graphics card?

Reuben Thomas

A Let's us answer your questions, one at a time:

- 1) The reason startup is taking so long is because you probably have set a lot of applications to start when Windows starts. Now this is not really necessary for all applications. Specially utilities like the Canon printer menu and so on. In order to reduce your startup time go to Start > Run > msconfig > Startup tab and untick the services that you do not want to start up when Windows starts. But if you are not sure which services to untick, install the CCleaner utility which is bundled in the DVD under Essen-

Run "msconfig" to launch the window

- tials. First Analyse system and then Run CCleaner.
- 2) The DDR3 1333MHz is the specification of the motherboard, in the sense that it indicates that the board supports upto 1333 MHz DDR3 memory. The memory you have lodged in the RAM slot is running slower. That's fine.
- 3) Yes, you can connect your TV to the HDMI cable coming out of your graphics card and use it as a monitor.

Running multiple OSes

Can you please suggest me some software utilities or applications by using which I can run multiple OSes simultaneously. I want to use Windows 7 and Windows 8 simultaneously. I currently use Windows 7 32-bit edition. Please help.

Milind Fegade

A You can use the utility Virtual Box to have multiple OSes running on your system. You can find it in the DVDs that are bundled with the magazine or can download it from (<http://goo.gl/4bbl>). On installing the utility, it will ask you to allocate free space on your HDD on which a new OS can be loaded.

American Megatrends bootscreen with 'Press F1 to Run SETUP' message

This is the first time I am writing to you and I am a very big fan of your magazine.
