

IOS 6

The latest Apple mobile OS doesn't come with a bag of tricks that not only add glitter and glamour to iOS, but it also incorporates features that brings it up to par with some of its popular rivals. Overall, there are lots of nifty additions to the OS' repertoire to make it truly shine and more compelling for past and present users of iPhones and iPads. We try and cover some tricks that you absolutely must try.

Siri app launcher

When you have hundreds of apps installed on your iPhone or iPad, finding the one you want at any given time can turn into a tedious task. There's only so much Spotlight searches one would execute before wishing

Siri is a pretty smart personal assistant – it can launch apps

for a better workaround. For your iOS 6-enabled Apple device, there is such a workaround. And it's better than the option of filtering everything down to folders and trusting your memory to recollect the correct one for any particular app.

Siri is the answer to this app-launching woe. The voice-assisted assistant in iOS 6 can launch apps if you ask her to do so. Just hard-press your supported iOS 6 Apple device's Home button to launch the Siri console, hit the microphone button, and clearly speak out the name of the app you want

iOS 6.....	07
Chrome	08
SublimeText.....	11

Tips & Tricks has its own page numbers, and does not follow the rest of the magazine's page numbers. This is done to ensure that you can cut out and save T&T in a separate folder for later reference.

to launch. So in all the mess of overflowing apps, Siri can actually launch apps faster and in lesser steps compared to finding it through Spotlight. Don't be shy, give it a try.

Access History

How many times has it happened that you visit iTunes Store or Safari browser, trying to remember that interesting app or web page that you saw couple of days back? And how often does your memory fail you in such instances? Most of the times, without a doubt – it's a common occurrence for all iOS users of the past.

page to reveal the browser's History instantly. From here, you can easily access and scroll through your Safari data all the way back when you started using your iOS 6 device.

Guided access

Our phones are seldom our sole possessions these day, as they easily extend into digital toys for kids at home. How does one give one's iPhone or iPad to a technically novice-minded young one or adult and expect them to not interfere with any other functions of the device that you deem as off-limits?

Well, in iOS 6, Apple has finally embedded a feature called Guided Access which tries to address this specific issue for iOS 6 device owners who have over-inquisitive kids demanding their gadgets. Guided Access lets you open an app or a game and basically explicitly instruct the iPhone or iPad to limit the device's interaction with that particular active app and nothing else.

To turn add Guided Access in your iOS 6 device, go to General Settings > Accessibility > Guided Access. Turn the feature On by tapping on its slider button. Once your device is in Guided Access mode, open up any application, triple click on the Home button, click on Guided Access and give

But in iOS 6, Apple has one-click access controls to quickly look up past history of your browsing data either within Safari or the App Store.

If you're in the iTunes app, shopping for something, just look for the History button in the search bar which should tell you your entire history of accessing iTunes and past transactions starting from the most recent on top.

In Safari, just hard-press the back button on any open Web

Your iTunes browsing history is saved for quick access in future
