OUR PICK OF THE BEST TECH ARTICLES FROM AROUND THE GLOBE

(MUST READS)

SMART APPLIANCES? REALLY?

We saw some smart home appliances launched at CES with ridiculous pricing over their non-smart counterparts. In this article, the author builds a case for how smart appliances should actually be and debunks the 'smartness' of the current appliances.

PARTICLE PHYSICS AND SHOPPING RECOMMENDATIONS?

Nothing could be as different as particle physics and online shopping recommendation engines. Yet researchers from a Swiss university are using the philosophy behind particle physics – particles occupying most energetically favourable states or in case of bosons there is no limit to the number that can occupy a given state – and applying it to improve online recommendation engines

GRAPH SEARCH: THE INSIDE STORY

Introducing Graph Search

Q Photos before 1990

Explore your world through photos

Now you can use simple, specific phrases like "Photos my friends took in New York City" to find anything you want.

Facebook announced its third pillar – Graph Search – on Jan 15th, but this Wired senior writer got early access to the system and has written a wonderful piece on the making of Graph Search. Fun Fact: Graph Search was headed by two ex-Google employees (one of whom was instrumental in forming Google Maps and Google Wave). <http://dgit.in/SpojWo>

A Larry Page interview

Google CEO Larry Page rarely gives interviews and when he does, the tech world takes notice. Here he talks about the need to work beyond incremental changes, Google X, importance of being able to market your innovations, the future of Motorola and much more.
