Buy Note II or wait?

I was thinking of buying Samsung Galaxy Note II, but I would also like to know if I should wait? Is there any other flagship product from Samsung or HTC which will be getting launched in 2013? I can manage my budget for Note II, so if there is any other upcoming smartphone, then please let me know. I really need your help and views. Please do the needful.

Yusuf Goriawala

Yes, if you can afford it, the Note II is the best flagship device money can buy. Samsung, HTC and all the other premium smartphone manufacturers have adopted an annual refresh cycle for their devices. In 2013 we expect to see the Note III, Samsung Galaxy S IV and other flagship devices from manufacturers. If you are buying a device today, then yes the Samsung Galaxy Note II is great. We suggest you wait till Feb as at MWC 2013 we will see the smartphones slated to launch in 2013.

Tablet or Phablet?

I am having trouble selecting between Note 10.1 and Note II for my father. He currently uses Samsung Galaxy Y. He often complains that he is fed up of the small screen and jokes whether his eyesight is getting weak due to old age or due to small screen :)

Can you please give me reasons for selecting either of the gadget and also some cons about each.

Nikhil Agrawal

You are choosing between two devices from different product categories. The Note II has a 5.5-inch display where as the tablet has a 10.1-inch display. If your Dad wants to carry this device in his pocket, then we suggest you take a look at the Note II as it qualifies as a phone with a really large display. The tablet on the other hand doesn't fit in your pocket, the large display is more comfortable for reading and the addition of a SIM card slot means that you will need a bluetooth headset for calls. The best thing to do would be to take your Dad to a Samsung

showroom and give him some hands on with all three. See which is the device he is most comfortable with in terms of portability, reading text/mail and above all comfort. Which is the product that fulfils his requirement.

Suggest a laptop

I want to buy a laptop. My budget is ₹55,000. I want a 3rd-gen Intel Core i5 or i7 processor, 4GB RAM, 1 TB HDD and an HD LED screen. Please suggest some good laptop models. I need it urgently.

Harshita Kothari

On the basis of the general specs that you have mentioned, we would suggest you consider the Samsung NP350V5C. This is priced at just above ₹50,000. (<http://dgit.in/10TPL3u>). With this particular configuration, you get the third generation Intel Core i5 processor, 4 GB of RAM, 15.6-inch display, a 1 TB hard drive

and the AMD Radeon HD 7670M (2 GB) graphics. You might also want to consider the Lenovo IdeaPad Z580 (59-333345 – <http://dgit.in/10MSXwY>) which costs ₹48,990. This also has the latest gen Core i5 processor, 4 GB of RAM, 15.6-inch display, 500 GB hard drive and a NVIDIA GT630M (1 GB) graphics.

Entry level DSLR

I am an entry-level photographer looking for a DSLR which could last me for years to come. I'm looking in the price range is ₹25,000 – ₹34,000. I prefer Nikon and have in mind the models D3200 and D5100. Please suggest the right one.

Elias Alan Fabian

Purchasing a DSLR is a rather straightforward task, given how most bodies in a particular segment offer pretty much the same features. If you're looking at the D3200, we'd say go for it as it is a great camera. The D5100 on the other hand is slightly older and features a sensor with a lower pixel count, but features a slightly better AF performance when in Live View mode. The D5100 costs ₹34,950 with an 18-55mm kit lens while the D3200 costs ₹36,450 with the same 18-55mm kit lens. Then there is the D5200 that's expected to come out within the next month, which has the sensor from the D3200 but a much beefier AF system than the D5100. It will cost ₹46,950 with the 18-55mm kit lens.

Now if you can wait and extend your budget, our recommendation would strongly be to buy the D5200. For ₹34,000 the D3200 would be the camera to go for.
