THE PERFECT ENCLOSURE

We pit 25 cabinets against each other in this month's shootout, right from the cheapest cases to the pocket burning meteor-sized ones. Hold on to your thumb screws because this isn't going to be an open and shut case

When the time finally arrives to build or upgrade your rig, you will obviously want the very best components that can be bought in your budget. So after selecting all the innards, your next big decision should be to select a good cabinet. In most cases, people focus on all the other core components and end up buying cheap and flimsy cases.

For the lack of a better word we'd call that plain silly, because a bad cabinet with poor build-quality, improper airflow will increase the internal temperature of the cabinet and decrease the life of your precious components. This is where we come into the

picture, to help you make the right decision and help you choose the best cabinet for your needs.

Mini-tower and mid-tower cabinets under ₹5,000

This price bracket has the most budget-friendly cabinets including mini-towers as well as mid-towers. Some of the cases mentioned in this category have features that you may get in higher-end cabinets as well but for a fraction of their price. Let's take a closer look at them, shall we?

Cooler Master Elite 344

The CM Elite 344's design is inspired from its bigger brother the CM Elite 311 but the Elite 344 is a micro-ATX case. It's simple looking with

a glossy finish at the front and silver accents around its borders. The side panel has space to add a 90 mm fan to improve air-flow. But it being a mini-tower, ₹2,400 is still on the expensive side for us to be fully sold on it.

Huntkey T-91

The T-91 from Huntkey has a simple meshed design on its front bezel with some slit-like grilled accents. The power button is big and has nice feedback to it when pressed and it lights up from the top to give it a nice look. The ports are aptly placed and easy to reach. Going to the side panels you will notice that the left side panel has a grill which can be used to mount fans. Inside the case are some plastic blockers used to close out sharp parts of

the case to prevent cuts during installation. The drive caddies are well made and tool-less. But one thing which is missing from this case is USB 3.0.

Bitfenix Merc Alpha

The Bitfenix Merc Alpha may look spartan, but don't let looks fool you, because it packs quite a lot of impressive features when it comes down to functionality. It has plenty of room for mounting more fans as desired. The number of USB ports on the Merc Alpha is also an added advantage. The PSU can be mounted either with its fan facing downwards or upwards. Modules in this case are stripped down to cut costs but its not necessarily cheap at ₹2,849. We didn't like its laterally mounting hard drive cages as the cables interfere with other components.
