

Women's Safety App

Three Nashik youths have developed an Android app called Me Against Rape that women can use as an emergency alert system

Videocon 4G Services

Videocon revealed plans to launch its 4G services in India later this year, using the 1800MHz spectrum bought in 2012 <http://dgit.in/100b59H>

Circle Herculean

Cooler Master K380

This case has a design which is somewhat inspired from Cooler Master's HAF series of cases but without the HAF nomenclature. The front panel has a zig-zag design to its edges, along with a metallic CM logo and a meshed grill. Its top is raised so as to provide for an air-vent. Powering on this case, you will notice a Red LED fan with a honeycomb grill at the front which looks futuristic. A big bulging side-panel window lets you see inside the case. The niggling bit is that its hard drive cages are laterally placed. There is not an abundance of space in this case but it gets the job done.

Corsair Carbide 200R

Corsair Carbide 200R has a very basic but quite a functional design. The front of this case is plain with matte plastic, and honeycombed slits are used for air intake. Installing 3.5-inch

or 2.5-inch drives in this case is very easy – you just need to slide the drives in the cages and they get locked in. It even has four easy-to-use compartments for 2.5-inch drive installation. Though it has some nice features, but we feel its pricing at ₹4,000 is on the higher side.

Zebronics Bijli 2

After the original Bijli, Zebronics has improved their design with the Bijli 2. It has a meshed front and the ports as well as buttons on Bijli 2 are all at the top for ease of access. The power button is backlit and the side panel window is nicely designed to make place for viewing the innards of the case. It also provides tool less installation for the PCI cards by using small clips. We found this case to be very cool during testing mainly because of sheer number of fans included with the case. But this case will pull in

a lot of dust, as it does not come with dust-filters at all.

Circle Tornado

This is a decked up case as far as features are concerned. The top of the case protrudes to allow for 2x120 mm fans and also has four slidable switches for its fan controller which has low, normal and high settings for each individual fan. The front is completely meshed and has a wide variety of ports including an eSATA port. Its side panels though wobbly have space to attach four optional fans. The dust filters on the side-panel are screwed down. Velcro cable ties make cable management easy. Its HDD Bay section is removable but overall the case is still a bit cramped.

Cooler Master HAF 912

The CM HAF 912 is a budget-friendly alternative to CM's higher end line of their HAF breed of cases. Its front bezel has an aggressive look to it with a metal mesh and dust filters. The side panels of the case also protrude outwards and the left side panel has the HAF logo painted on it. The build quality of this case is solid but its side panels have some amount of flex. There is plenty of space inside the case to accommodate most components. Cable management is easy in this case. We found that the included fans provide a good amount of air-flow inside the case and keep the case cool.

And others

Mercury Romeo Omega was another mini-tower we got, the insides of this case are very basic and there is not much difference between this and the CM Elite 344 except it has an 80mm fan at the rear and costs half as much. The Antec One S3, had a nice plastic matte design and is a good case to consider, but we found it tough to fix its left side-panel due to less clearance.

Category verdict

The **Huntkey T-91** comes out as the winner of the **Best Buy** award in this lower end of the spectrum mostly because it's dirt cheap but still has nice features and performs well enough. The Bitfenix Merc Alpha was also a worthy contender due to its price but the Huntkey T-91 at ₹1,450 is what you must get (if you have no space constraints) rather than getting a mini-tower case. People looking for more style in their cabinets, can opt for the Cooler Master K380 as it has a nice feel to it along with most of the bells and whistles available in good cases.
