Choose your filtering level

☐ **High** Protects against all adult-related sites, illegal activity, social networking sites, video sharing sites, and general time-wasters. 26 categories in this group - [View](#) - [Customize](#)

☐ **Moderate** Protects against all adult-related sites and illegal activity. 13 categories in this group - [View](#) - [Customize](#)

☐ **Low** Protects against pornography. 4 categories in this group - [View](#) - [Customize](#)

☐ **None** Nothing blocked.

☒ **Custom** Choose the categories you want to block.

☐ Academic Fraud	☒ Adult Themes	☒ Adware
☐ Alcohol	☐ Auctions	☐ Automotive
☐ Blogs	☐ Business Services	☐ Chat
☐ Classifieds	☐ Dating	☐ Drugs
☐ Ecommerce/Shopping	☐ Educational Institutions	☐ File storage
☐ Financial institutions	☐ Forums/Message boards	☐ Gambling
☐ Games	☐ German Youth Protection	☐ Government
☐ Hate/Discrimination	☐ Health	☐ Humor
☐ Instant messaging	☐ Jobs/Employment	☐ Lingerie/Bikini
☐ Movies	☐ Music	☐ News/Media

OpenDNS lets you block and filter websites

except a few websites that are essential for work. The other option is to use a tool like OpenDNS that sits completely out of reach of the end-user, giving you the ability to filter your network's Web traffic. With OpenDNS, you can deploy whitelists and blacklists (basically, websites that are allowed and those that aren't) for everything accessed through your office's network router. It's easy, secure, and will make you feel like some sort of evil Web dictator. Muahahaha!

Start using online collaboration suites

The advent of Internet has led to an explosion of cloud services which help you collaborate and work better with your colleagues than ever before. Most of these services are either free or come at an affordable price for their convenience and novelty factor. We all know Google Docs (part of Google Drive now) for a while, but Microsoft's also renewing its assault on the cloud productivity suite, offering Office 365 and free Web apps. Instead of transferring documents or spreadsheets through email, wouldn't it be easier to edit them simultaneously with your colleagues and discuss the changes? Work gets done faster this way. You can also look at task-management suites like Producteev or Asana to allocate assignments and manage workflow within your team of employees. Producteev lets you share documents, get email alerts, and syncs everything with Google Calendar, apart from other things. Asana lets you do pretty much the same things in a plain and simple web dashboard. It's important to stick with these services and spend some time getting used to them. While Asana is completely free to use between 30 users, Producteev is free for up to two users after which it becomes a paid service. Equipped with a task management and real-time productivity suite, your office employees will slowly start functioning like an efficient team.

Spruce up office hardware

No employee will be happy to work with office equipment that isn't good. If your office is saddled with second-rate hardware, it can only go on for so long before showing signs of fatigue and eventual collapse. Enable your workforce with speedy, smooth machines and infrastructure, because slow, inefficient PCs and hardware is largely counter-productive. If you haven't done a system audit for over a year, it's time to do one now. Is it time to throw away that Pentium PC which you had converted into a makeshift server and finally invest in an always-ON new NAS device? Check if hard drives are buckling under pressure and need replacing - contemplate SSDs even, what with their prices coming down. One can never

have too much RAM, especially if it's an old system - check for 64-bit compatibility before bumping up the system RAM over 3 GB. Also, regularly open up PC cabinets to blow out dust that easily accumulates near electronic equipments. Little things they may appear, however they can really help you speed up and get more efficient with your work.
