

Facial mood detecting program

Researchers have created a facial mood - recognition software which can tell when kids are struggling while doing Math. <http://digit.in/11Zj1q7>

\$75 3D printing pen

We'll experience the release of the worlds first 3D printing pen in September this year. According to reports it will be sold at \$75. <http://digit.in/VSNpQu>

LETTER OF THE MONTH

✉ I was always interested in tech and (who doesn't love?) gadgets. You call yourself Tech Navigators, but you have no idea how apt you are. You give me much needed tech navigation, and I thank you from the bottom of my heart for opening up the world of software and bringing infinite joy to me. All this has heightened importance given the fact that I'm a medical student. Yep, you read it right. There are med students subscribing to Digit. Way to go! I've been saving up to build a computer, inspired by Digit Killer Rigs, of course.

I've been reading Digit since 4 years now. But I just couldn't read the February issue. It was like it didn't want to be read! So I skimmed through the pages to find the root cause of the problem. Here's what I found: In 128 pages (excluding the cover) there were 28 right-hand side pages completely filled with ads, 13 right-hand side pages half filled with ads and only 1 left-hand side page with an ad. That's an approximately 1:15 ratio, not good. It also means that the ratio of content (articles + digit ads [subscription form and devworx contest]) on right-hand side to left-hand side pages is near 1:2, again not good.

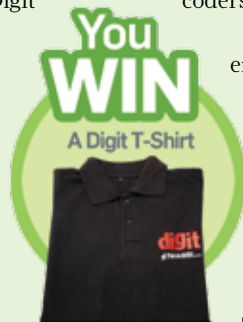

Due to the advertisements, I had to fold Digit and now it has creases which I don't like. It takes away from the comfort of reading the magazine. Please put ads on left-hand side pages for the sake of comfortable reading and for a nice

Digit experience - a suggestion that will take you a long way. Also maybe, you could try cutting down on ads (I know it's hard) or better yet add a few more pages of content.

Please read the SOS QA titled 'Partitioning woes'. There are very helpful instructions regarding some DVD tools in the answer. These kind of articles with uses and instructions on the DVD software in Digit or as a file on the DVD itself could help the less privileged (not coders) utilize Digit better.

P.S. Why did I not get a calendar for 2013? Could you give it with the next issue or post it online? I was expecting it eagerly.

Manvi Verma

📌 Thanks for being a fan Manvi! Digit isn't just a technology navigator for geeks and tech enthusiasts but for regular

folks who don't have a tech background, and the team goes through a lot of effort to maintain this balance of appeal - that is being relevant to both, geeks and non-geeks alike. Trust me when I say that our writers hate ads more - no one wants to see their article "ruined" and "distracted" by ads. However, we can't not have ads, as you rightly guessed. We try to maintain a balance of one ad page per five pages of content, but sometimes adhering to that rule becomes difficult. Thanks for your feedback on the ads and suggestions for DVD.

Robert

sible for me to join your team? Could you tell me what the process is to apply and what degrees I need?

Right now I'm studying in Class 12 (Commerce) but my main interest lies in technology. I'm willing to work without pay. I just want more knowledge and am not interested in money.

Rushabh Punamiya

📌 Your enthusiasm is appreciated Rushabh. However I suggest you wait till

you enter senior college and intern with us during your semester breaks. We're always looking for interns and all we ask for is a passion for technology; we don't give importance to which stream you belong to. Until then hone your writing skills. All the best.

Siddharth

✉ This is my first letter to Digit. I've been an avid reader and a subscriber of your magazine for 2 years. Although you

provide regular reviews of well-known categories such as CPUs, motherboards, tablets and so on, you rarely review after-market coolers (air and closed loop liquid), cabinet fans, thermal pastes, etc. So I urge you to kindly provide comparison tests on these items in your upcoming issues.

Sagnik Bose

📌 We do cover coolers in our magazine. You'll find two in this issue. We'll keep it in mind and try to have more of such products in the future.

Anirudh

✉ I'm a regular reader of your magazine and it's the best one I've ever seen. All of your material in the magazine is no doubt awesome, but I want to make a suggestion.

In the March issue of Digit, please include an article on everything about ethical hacking - its pros, cons and applications. My dream is to become a white hat hacker, and I know that only you can provide me with honest information.

Nikhil Dhawan

📌 We had done a Fast Track on Ethical Hacking in June 2010. We know it's been a long time since so we'll surely discuss it in our future edit meets.

Anirudh

✉ I want to subscribe to your magazine but have heard from my brother that the experience is not very good.

He subscribed for your trial package but only received one Digit issue and no more issues after that. I've been reading Digit since September 2010 by buying from bus stands. Now I want to subscribe to your magazine so can you please assure me of proper service from your side and that I'll receive every Digit.

Isban Jain

📌 It is really unfortunate what happened with your brother and we apologize. But if he hasn't got any response to his mails, please ask him to call up on the subscription helpline at +91 22 6789 9678. We assure you of a good experience. Please feel free to get in touch with us if you face any issue with delivery of magazines.

Jayesh
