

Intel-based phablets

Intel, in accordance with Asus, may release a phablet called Fonepad at MWC this year. It may be powered by an Intel Atom processor. <http://dgit.in/12ysQdK>

Android on Vertu

"Vertu", the luxury mobile maker launched a new ultra-expensive smartphone which runs on Android and is named Vertu Ti. It costs about \$10,000. <http://dgit.in/12aGq70>

Hackers exploit FB Java flaw, take down IIPM

Java drama for Facebook employees and other security concerns

Facebook has revealed that it was the victim of a "sophisticated attack" that led to malware being installed on employees' computers. A Facebook security post reveals that the hackers exploited a previously undetected flaw in Java's built-in security mechanism to infect the developer site, which in turn infected the computers of the Facebook employees.

Facebook has reported the matter to Oracle (the company behind Java) and a security patch has already been issued to resolve the vulnerability. Facebook claims that it has found no evidence to suggest that any data pertaining to Facebook users has been compromised. PC Mag points out that Twitter also suffered a similar attack recently – one that it had blamed on Java browser plug-ins. However, in Twitter's case, the attack did result in user credentials being exposed.

The Java attacks resulted in many companies either recommending users to turn off Java plug-ins in their browsers or outright banning Java plug-ins from working on browsers. Oracle was only able to get Apple

to unblock Java from working on Safari after releasing multiple security updates within the span of a couple of weeks. Unfortunately, Java still remains an important component in many web applications and will undoubtedly remain the target of hackers in the future.

Anonymous takes down IIPM sites after DoT blocks 'defamatory URLs'

Hackers group Anonymous briefly hacked and took down websites of The Indian Institute

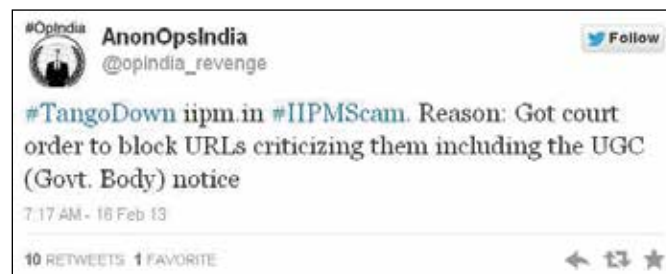

astonishingly included a July 2012 notice from the University Grants Commission (UGC), which deemed that IIPM was not a "University within the meaning of Section 2(f) of the University Grants Commission Act, 1956."

According to a Wikipedia entry titled 'Indian Institute of Planning and Management advertising and blogging controversy', the blocked URLs include articles of news portals like Outlook, Careers 360, The Caravan and others. The IIPM controversy has taken

over the air on the iOS devices or via iTunes on computers. The update handles a problem with the way iOS handles email. Previously, when email was being checked on the Exchange Server, data usage would be significantly ramped up, having an immense effect on battery life. The update is available for iPhone 3GS, 4 and 4S, iPhone 5, all iPads following iPad 2 and all iPod touch devices after the 4th generation iPod touch. For the update, simply navigate to Settings > General > Software Update > Install.

It's unclear whether the update fixes another bug in the previous update. The bug enabled anyone to bypass a password-protected lock screen by following a few simple steps employing the use of the power and home button, and the emergency call feature. Apple had acknowledged the bug and said that it would be fixed in a future update. 

of Planning and Management (IIPM) after the Department of Telecom (DoT) ordered the Internet Service Providers (ISPs) blocking of 73 URLs that featured content against the private business school and its director Arindam Chaudhuri. The IIPM director has also responded to the ongoing controversy, saying that he's happy defamatory links with malicious interests were taken down. According to a Times of India report, the websites IIPM.in and IIPM.edu were down for about nine hours due to the attack. The list of the 73 URLs to be blocked

the debate over internet freedom and web censorship to another level as it's perhaps the first time a government page has been blocked. While allegations and blame games are set to make the issue murkier in the near future, the government shouldn't delay intervening in the matter and ensure that 'freedom of speech' as well as 'freedom of criticism' be maintained.

iOS 6.1.2 increases your battery life

Apple had promised an iOS 6.1.2 update and the latest update is now available for download
