

Yandex beats Bing

Russian search engine Yandex has beaten Microsoft's Bing in the search engine rankings. It's 4th behind Google, Baidu and Yahoo <http://dgit.in/YKmcub>

Take better photos

MIT's working on a new chip that can take a 10MP HDR image from your smartphone camera in a matter of milliseconds

sticker on the side. The smoked side-panel window is a nice touch and a pleasant change from the usual windows that we find. Of course, the case doesn't look like a spaceship, but the only concession to its aircraft inspiration is the nicely detailed tail with horizontal and vertical stabilizers. Opprezors: Annihilation Squad Member No. 2 By Masbuskado

This mod is part two of a series of mods made by the modder, hence the unusual name. This isn't just a mod though, in true RPG style, it has a nice backstory and is actually part of the "Saga: Opprezors v/s Hands Of The Gods" story that was written by the modders themselves.

As you can see from the image, this is a very unusual mod and a lot of hard work has gone into its creation. The whole case seems to be canted over at an angle and actually looks a bit like a bench. One of the coolest things about this case is the top "hatch", which replaces the side-panel as a means of accessing the case. There are slits all over the case, not only to aid in cooling, but to enhance the looks of the

case as well. The CPU cooler, a CM Gemini II M4, was very well chosen and complements the unusual design of the case very well. Check it out at: <http://dgit.in/Yc8Aeu>

Reventon MK II By Paul Tan

There are amazing PC cases and there are limited edition sports cars. What you get when you combine a Silverstone cabinet with a Lamborghini Reventon is the Reventon MkII. This work of art has been lovingly designed to closely follow the same design concepts that make the Reventon so special and unique. Paul Tan

somehow managed to source original Lamborghini logos and he has used them well. The front of the case greets you with the badge and then slides down to reveal a small display panel. There is some nice detailing on the side-panel, including air vents that run along the bottom and a leather-backed Lamborghini logo on the window. Through that window you see an intricately detailed, custom liquid cooler that is meant to look like an engine block. A not-so-subtle touch that any car fanatic will appreciate. Check it out at: <http://dgit.in/VOFDMr>

X79 Iron Jaguar By OrthusWong

Who doesn't like mechs? We know we do. OrthusWong managed to bring his childhood fantasy to life with this brilliant case mod that looks like anything but a PC. He completely redesigned the chassis and, somehow, managed to add a minigun and mount a rifle on the case. The actual hardware is housed in a clear cockpit along with the obligatory liquid cooling,

and in a brilliant decision, the radiators are mounted on the shoulders with the tubing masquerading as hydraulic pressure tubes. The military green paint and the biohazard stickers add the final touch. Check out this mod at: <http://dgit.in/Ydw8xG>

Titanium PC By Paul Tan

This won the Cooler Master Case Mod 2012 competition. What makes this case a winner? Well, for a start, there is no aspect of this case that hasn't been modded and the design doesn't compromise on the functionality of the case in any way. The top panel includes the power button, which when depressed, lights up some LEDs that display the modder's initials. The front grill has what seem to be Titanium rods and the side panel

window has metallic accents. The entire case has been repainted and is a perfect blend of metallic accents and Titanium. The "Titanium" theme has been carried over to the innards of the case as well and even the CPU cooler and HDD bay have the logo plastered across them, not to mention the cables which have also been redesigned with the theme in mind.
