

Medieval Technology

Check out this Quora thread for discussions about some fascinating examples of ancient or medieval technology. <http://dgit.in/131dRcK>

Myths about technology

Head over to the link below to know what are the most popular Myths and Misconceptions about technology and science. <http://dgit.in/YsNPHw>

path or a wrong folder for your section, don't worry as you can select "Edit Section" and change the path of the section to the one you desire. Or if you don't need a particular section of the Library on your Plex Media Server, you can delete the section altogether. You also have an option to refresh a section and let Plex see if there are any changes in your folders and let Plex update the Media library accordingly. Selecting "Turbo Scan" will quick scan the provided path for changes and selecting "Deep Scan" will scan the system thoroughly for even the most minute changes.

When inside a section in your library, you can use the various sorting features to sort your files according to the added dates, release date, name, rating, duration and also resolution. Users can also filter

This is how the Plex Channel directory looks like.

the content based on various parameters such as Genre, Year, Actor, Director etc. which makes managing and consuming your content a child's play. Plex Media Server also provides users with an "Analyze Media" option which analyzes all media in the library section and captures information about how to optimally playback the media. Real time updation features of Plex downloads information about all the media files from the internet.

Streaming Internet content

You can not only add your local media folders to Plex but also add video channels from a list of channels within the Server. Once you select a channel, Plex patches

Drag this button to your bookmark bar from your myPlex page

that channel onto your Channel grid and you can stream videos from the selected channels, it's that simple.

If for eg., you want to add Youtube or TED to your list of channels, just head over to your Plex Media Server > Click "Add Channel" > Select the desired channel (in this case Youtube or TED) > Click "Install". Once installed you can browse the added channel.

Sharing media content using myPlex

Plex also provides users some social elements as using Plex you can share your media content with others; but doing so, requires a myPlex account. You can log in to "myPlex" using your previously created Plex account details in the Plex Media Server. Once signed into myPlex, check "Publish Server" (not required in some cases where Plex automatically selects this as default) and your media content is available for sharing. You can then add friends by sending them invitations and even get recommendations.

myPlex also provides you with a "Plex it!" button which you need to drag across to your bookmarks bar and save. With it you can save a video to your queue just by clicking the "Plex it!" bookmark and the video on the current page gets added to the queue and you get notified about this by a panel which appears on the left side of the web page. This is very similar to how some Read-it-later apps and extensions work. Your myPlex account also provides you with the functionality of Emailing your desired video page by just sending it to your "unique queue email address" which is shown at the bottom of your myPlex home page. Every link which you send to this particular address gets added to your myPlex queue. You can save this unique queue email address and email links from your iPhone, iPad or your Android device.

Using Plex on DLNA enabled devices

Since Plex is a cross platform enabled Media Center, it also has support for DLNA devices. You can enable DLNA and use Plex to stream internet channels to several portable devices.

To enable DLNA, go to Settings > Plex Media Server > "DLNA" > Check "enable DLNA" > Save.

You can also select the advanced options in this sub-menu and edit DLNA client preferences to use more features. Installing the Plex Media Center on your portable devices adds DLNA functionality for using Plex.

The DLNA Settings page.

Other features of Plex

You can download and install the paid and premium version of Plex for your respective Android or iOS smartphones and tablets and enjoy using Plex in its full glory on a portable device. You can also download the free Plex Remote app from the Google Play Store or the Apple App store and patch your iOS or Android device to your Plex Media server. You just need to enter your server name and IP address on your device and it will then enable you to control playback or selection using your mobile device. It really makes the job easy.

Video transcoding options can also be tweaked in the "Settings" menu on your Plex Media Server to allow for higher bitrates for better connections.

Plex Plug-ins

Plex being a versatile media centre also allows for installation of third party plug-ins for better use and improving functionality. Some of the Plex plug-ins offer extended support for Televisions running Plex Media center. A few of the widely used Plex plugins are - NBC Olympics, Flickr and Feed Me. You can find more plug-ins here: <http://dgit.in/Xsq3fv>
