OUR PICK OF THE BEST TECH ARTICLES FROM AROUND THE GLOBE

(MUST READS)

THE LARGEST LIGHT SHOW ON EARTH

Talk about being at the crossroads of arts and sciences. Starting March 5, the San Francisco Bay Bridge will be arrayed with 25,000 algorithmically controlled LED lights. The display promises to be mind-boggling.

REINVENTING THE EMOTICON

Smileys are passe. But everyone loves them, nonetheless. So how do you make the emoticon cooler, more relevant to us than ever before? Facebook and a Pixar artist are trying to do just that.

APPS THAT DRAIN BATTERY

Wouldn't it be just great to have a ready reckoner on what apps adversely affect your smartphone or tablet's battery? Someone at US telecom giant Verizon was thinking about the same thing.

STRANGEST SIMULTANEOUS INVENTIONS

We think of scientists as mad, isolated individuals, locked into their study or laboratory, working on a formula for the next big scientific revolution. As romanticized as this impression may be, it is hardly the case.

THE PIRATE BAY SUED AN ANTI-PIRACY GROUP FOR... COPYRIGHT INFRINGEMENT. NO KIDDING!

The Pirate Bay

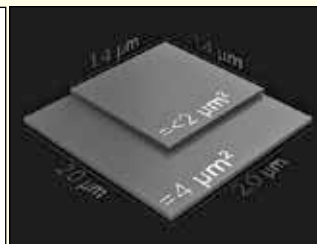

Yeah, that's no joke. It seems the popular torrent host has finally met its match and is getting a potent dose of its own medicine. It's suing CIAPC for copying Pirate Bay's website design and CSS files, including the pirate ship logo. <http://dgit.in/1IUe69R>

7 uses for an outdated iPad

With Apple reducing the time elapsed between the launch of iPad 3 and iPad 4 to under less than a year, it's bad news for the original iPad, iPad 2 and even iPad 3 owners – their tablets are old. Do not lose hope, as we tell you how to give them a fresh lease of life.

UltraPixel? What's that?

With much success, marketers have long used soaring megapixel numbers on smartphone cameras to trick customers into thinking larger is always better. But HTC's newly coined UltraPixel term is just plain confusing, even by marketing standards, don't you think?

Graphene-led gadget transformation

For the uninitiated, Graphene is the mother of all graphites, which is a form of carbon. The substance has a lot of potential in gadgets of the future. Here's how it can lead a revolution of sorts in batteries of the future.
